

Practical 1

Aim: Explain the following terms: **File system, DBMS, RDBMS, DDBMS.**

File System:

- file system or filesystem is a method and data structure that the operating system uses to control how data is stored and retrieved.
- Without a file system, data placed in a storage medium would be one large body of data with no way to tell where one piece of data stopped and the next began, or where any piece of data was located when it was time to retrieve it.
- File system is a software that manages and organizes the files in a storage medium within a computer.
- File system is basically a way of arranging the files in a storage medium like hard disk.
- File system organizes the files and helps in retrieval of files when they are required.
- File systems consists of different files which are grouped into directories. The directories further contain other folders and files.
- File system performs basic operations like management, file naming, giving access rules etc.
- Example:
NTFS (New Technology File System), EXT (Extended File System).

EXAMPLE:

If I create the different sub folders in the given drive with different name, I can access the data or information and perform the certain operations in the system and this system is known as the file system.

ADVANTAGES:

Cost Effective : File management system is extremely cost effective since it is a digital filing system. Whatever the type of document that needs to be stored as a paper can be in the form of digital. Therefore, there is no cost involved in building rents, purchasing cabinets and physical papers.

Security : The documents stored in the file management system is protected using authentication methods like username and password. Additionally, all the data is encrypted which makes sure a document is confidential.

Data Sharing : FMS allows very efficient way of sharing data with each and every person. The same data that is stored on files can be shared with multiple users simultaneously.

Reliability : The data that is stored in a file management system is far more reliable than physically storing it using papers and files. Unlike traditional methods of storing data, files here is very less likely to undergo damage or destruction. Any damages from nature or handling can be completely avoided in a file management system.

Data Backup : In case of a failure, file management system provides a easiest way for backing up data. For this purpose, computers on default offer functionalities.

DISADVANTAGES:

Redundancy: Redundancy is a kind of duplication that occurs if the same type of information exists in different locations. In this event, there is a possibility of memory wastage to take place resulting in higher storage costs.

Inconsistency : The same copies of data located in different places contain different values. For preventing this, there should be paper listing among different files.

Data isolation : If the data is stored in different locations, this could essentially mean that they are isolated in file management system. Under these circumstances, the formats of each file can vary significantly. As a result, extracting data from files can be difficult as it requires complex programming.

Accessibility : Accessing data in file management system is not an easy process. It is not convenient as it should be. Whenever a user needs to access an information using different approaches, they must execute a special program.

Data duplication : Since data is stored in more than one location, there is a possibility of data duplication to take place. If file management system undergoes data duplication it will cause problems in the storage space. These duplications are difficult to correct due to the fact that they are independent to each other. Hence, it requires manual correction which can take time and effort.

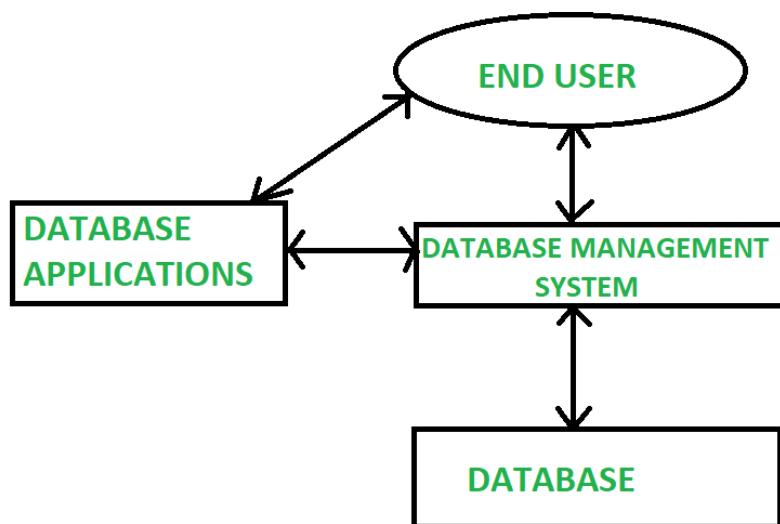

Applications :

- Language-specific run-time libraries.
- API programs using it to make requests of the file system.
- It is used for data transfer and positioning.

- Helps you to update the metadata.
- Managing directories.

Database Management System (DBMS):

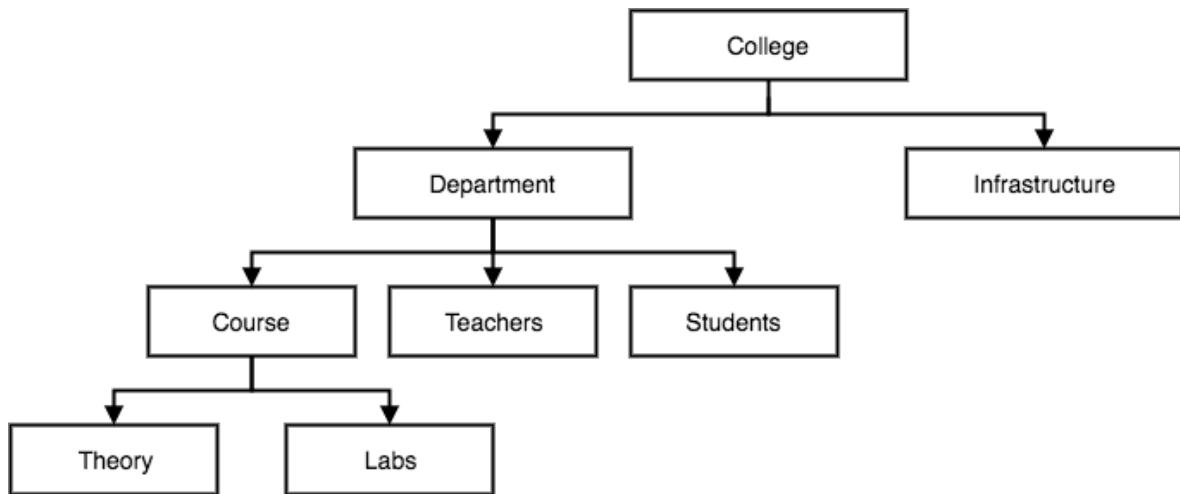

- Data - Fact that can be recorded or stored.
- Database - Collection of logically related data.
- Management - Manipulation, Searching and Security of data.
- System - Programs or tools used to manage database.
- DBMS - A Database Management System is a software for creating and managing databases.
- Database Management System (DBMS) is a software designed to define, manipulate, retrieve and manage data in a database.
- Database Management System is used for storing data and retrieving the data effectively when it is needed.
- Database Management System also provides proper security measures for protecting the data from unauthorized access.
- In Database Management System the data can be fetched by SQL queries and relational algebra.
- Database Management System also provides mechanisms for data recovery and data backup.
- Example:
 - Oracle, MySQL, MS SQL server.

EXAMPLE:

If I am making any websites or application, use the “database” for storing and managing the information such as MYSQL, HTML, FIREBASE.

If the system of the class is to be managed then I will be using the ID and name and using this two I will be able to get all the other information such as result, attendance, standard and fees etc.

ADVANTAGES:

Controls database redundancy : It can control data redundancy because it stores all the data in one single database file and that recorded data is placed in the database.

Data sharing : In DBMS, the authorized users of an organization can share the data among multiple users.

Easily Maintenance : It can be easily maintainable due to the centralized nature of the database system.

Reduce time : It reduces development time and maintenance need.

Backup : It provides backup and recovery subsystems which create automatic backup of data from hardware and software failures and restores the data if required.

Multiple user interface : It provides different types of user interfaces like graphical user interfaces, application program interfaces

DISADVANTAGES:

Cost of Hardware and Software : It requires a high speed of data processor and large memory size to run DBMS software.

Size : It occupies a large space of disks and large memory to run them efficiently.

Complexity : Database system creates additional complexity and requirements.

Higher impact of failure : Failure is highly impacted the database because in most of the organization, all the data stored in a single database and if the database is damaged due to electric failure or database corruption then the data may be lost forever.

Popular DBMS Software :

- MySQL
- Microsoft Access
- Oracle
- SQLite
- IBM DB2
- Microsoft SQL Server

Applications :

Banking : For customer information, account activities, payments, deposits, loans, etc.

Airlines : For reservations and schedule information.

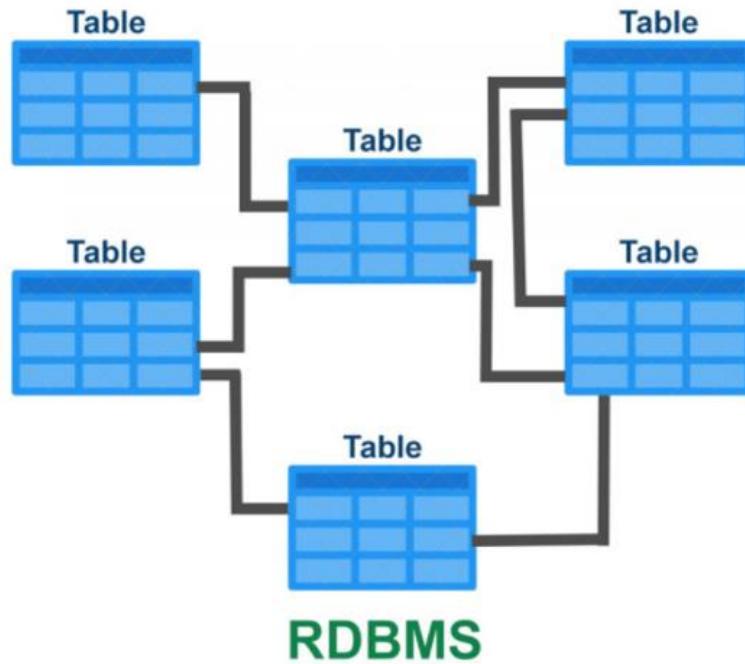

Universities : For student information, course registrations, colleges and grades.

Telecommunication : It helps to keep call records, monthly bills, maintaining balances, etc.

Relational Database Management System (RDBMS):

It is the system which defines the relationships among the available data appearing in a group that is used to store, manage, retrieve and query the data. It performs the CRUD operations (Create, Read, Update and Delete).

Each and Every table will be holding a relationship with the contents of other tables in the system and all the tables in the database system will be associated to the tables with similar properties.

Example :

If I want to fetch the data or information of the relationship among the two tables I can do it with the help of relational database system. I can fetch the details of the given data using the particular information in the table.

ADVANTAGES:

Speed : Even though a relational database is poor in terms of performance, still its speed is considerably higher because of its ease and simplicity. And also, various optimizations that are included in a relational database further increases its speed. So, all the applications will run with appropriate speed when used in a relational database.

Security : Since there are several tables in a relational database, certain tables can be made to be confidential. These tables are protected with username and password such that only authorized users will be able to access them. The users are only allowed to work on that specific table.

Accuracy : As mentioned earlier, relational database uses primary keys and foreign keys to make the tables interrelated to each other. Thus, all the data which is stored is non-repetitive. Which means that the data does not duplicate. Therefore, the data stored can be guaranteed to be accurate.

Multi User : Multiple users will be able to access a relational database at the same time. Even if the data is updated, the users can access them conveniently. Hence, the crashes happening from multi access is possibly prevented.

Simplicity : Compared to other types of network models, a relational database model is much simpler. It is free from query processing and complex structuring. As a result, it does not require any complex queries. A simple SQL query is sufficient enough for handling.

DISADVANTAGES:

Cost : The underlying cost involved in a relational database is quite expensive. For setting up a relational database, there must be separate software which needs to be purchased.

Performance : Always the performance of the relational database depends on the number of tables. If there are a greater number of tables, the response given to the queries will be slower. Additionally, more data presence not only slows down the machine, it eventually makes it complex to find information. Thus, a relational database is known to be a slower database.

Physical Storage : A relational database also requires tremendous amount of physical memory since it is with rows and columns. Each of the operations depend on separate physical storage. The targeted applications can be made to have maximum physical memory.

Information Loss : Large organizations tends to use more number of number of database systems with more tables. This information can be used to be transferred from one system to another. This could pose a risk of data loss.

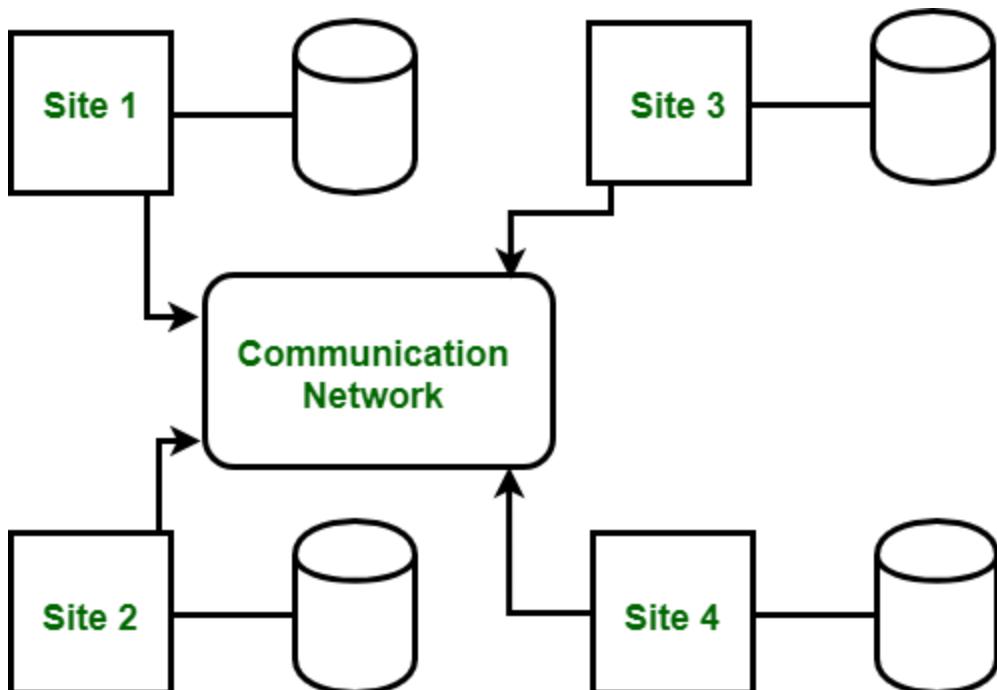

Complexity : Although a relational database is free from complex structuring, occasionally it may become complex too. When the amount of data in a relational database increase, it eventually makes the system more complicated. Each and every data is complex since the data is arranged using common characteristics.

Distributed Database Management System

It is used to manage the data that are to be distributed among the different computer networks or the different locations. DDBMS is a centralized application that manages a distributed database. This database system synchronizes data periodically and ensures that any change in data made by users is universally updated in the database. DDBMS is widely used in data warehousing, where huge volumes of data are processed and accessed by numerous users or database clients at the same time.

- A Distributed Database Management System (DDBMS) consists of a single logical database that is split into a number of fragments.
- Each fragment is stored on one or more computers under the control of a separate DBMS, with the computers connected by a communications network.
- Each site is capable of independently processing user requests that require access to local data (that is, each site has some degree of local autonomy) and is also capable of processing data stored on other computers in the network.
- Users access the distributed database via applications.

- Applications are classified as those that do not require data from other sites and those that do require data from other sites.
- We require a DDBMS to have at least one global application.
- DDBMS is collection of logically related shared data.
- The data is split into a number of fragments.
- In DDBMS fragments may be replicated. Fragments/replicas are allocated to sites.
- The sites are linked by a communications network.
- The data at each site is under the control of a DBMS.
- The DBMS at each site can handle local applications, autonomously.

ADVANTAGES:

Modular Development : If the system needs to be expanded to new locations or new units, in centralized database systems, the action requires substantial efforts and disruption in the existing functioning. However, in distributed databases, the work simply requires adding new computers and local data to the new site and finally connecting them to the distributed system, with no interruption in current functions.

More Reliable : In case of database failures, the total system of centralized databases comes to a halt. However, in distributed systems, when a component fails, the functioning of the system continues may be at a reduced performance. Hence DDBMS is more reliable.

Better Response : If data communication costs for data manipulation can be minimized. This is not feasible in centralized systems. If data is distributed in an efficient manner, then user requests can be met from local data itself, thus providing faster response. On the other hand, in centralized systems, all queries have to pass through the central computer for processing, which increases the response time.

Lower Communication Cost : In distributed database systems, if data is located locally where it is mostly used then the cost of the system will be much lesser.

Easier Expandable : The database is easier to expand as it is already spread across multiple systems and it is not too complicated to add a system.

DISADVANTAGES:

Complexity : The distributed database is quite complex and it is difficult to make sure that a user gets a uniform view of the database because it is spread across multiple locations. Complicated and it is difficult to find people with the necessary experience who can manage and maintain it.

Security : It is difficult to provide security in a distributed database as the database needs to be secured at all the locations it is stored. Moreover, the infrastructure connecting all the nodes in a distributed database also needs to be secured.

Integrity : It is difficult to maintain data integrity in the distributed database because of its nature. There can also be data redundancy in the database as it is stored at multiple locations.

Increased training cost : Training costs are generally higher in a distributed model than they would be in a centralized model, sometimes even to the extent of offsetting

Technological difficulty : Data integrity, transaction management, concurrency control, security, backup, recovery, query optimization, access path selection, and so on, must all be addressed and resolved.

Conclusion :

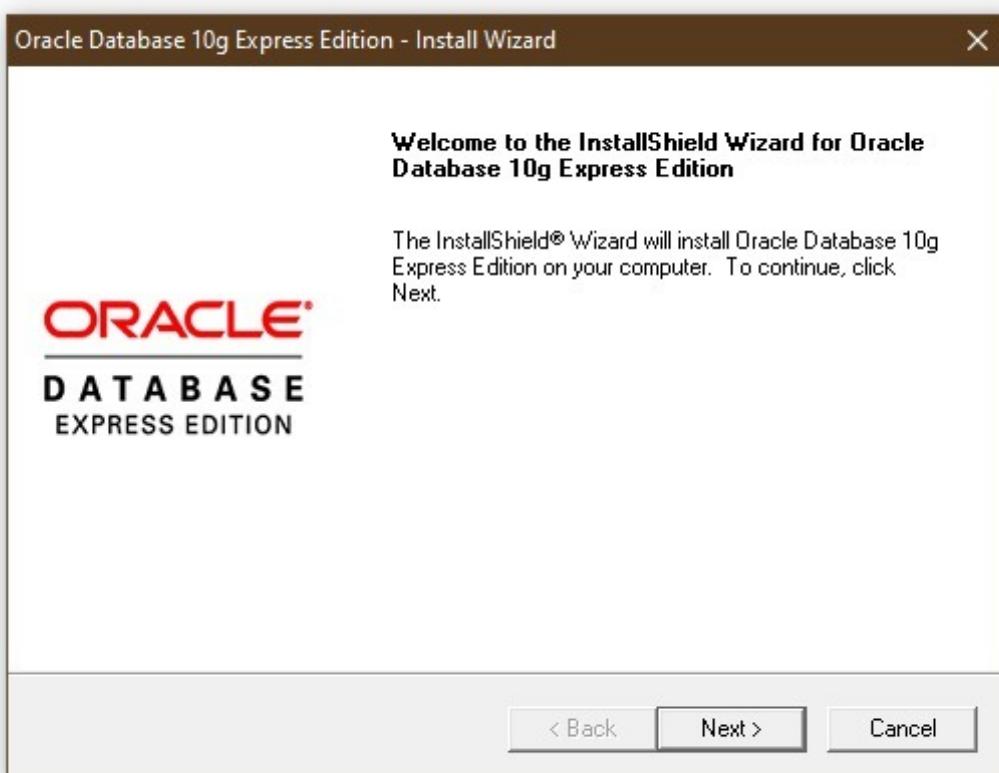

In this practical, I have learned about the basic of database management system and its type, File System, Data Base Management System, Relational Data Base Management System, Distributed Data Base Management System.

Practical 2

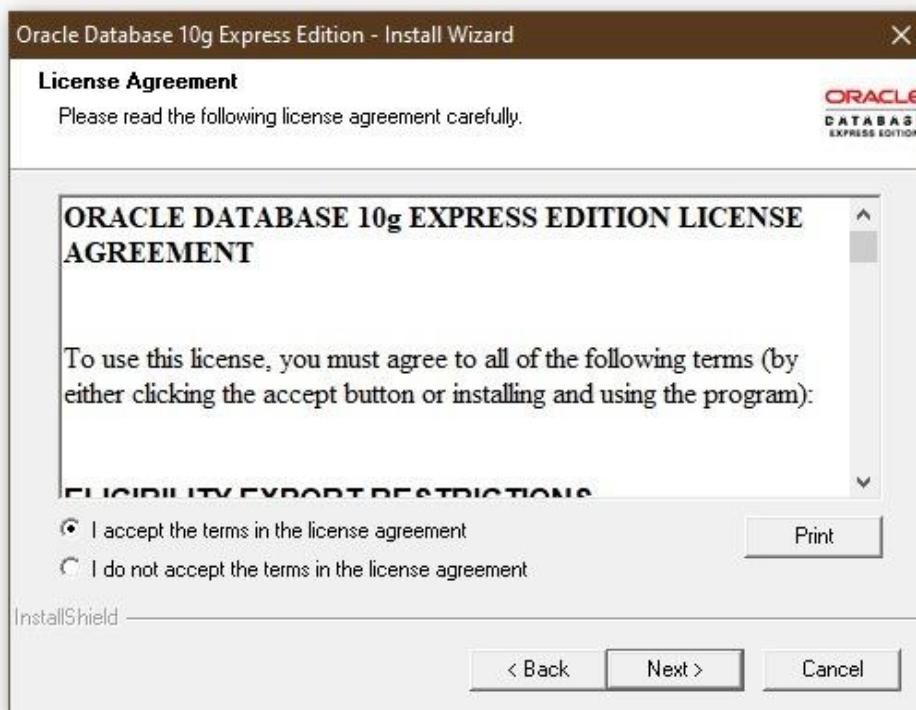

Aim: Introduction to Oracle (step by step installation, introduction of sql, plsql).

Steps:

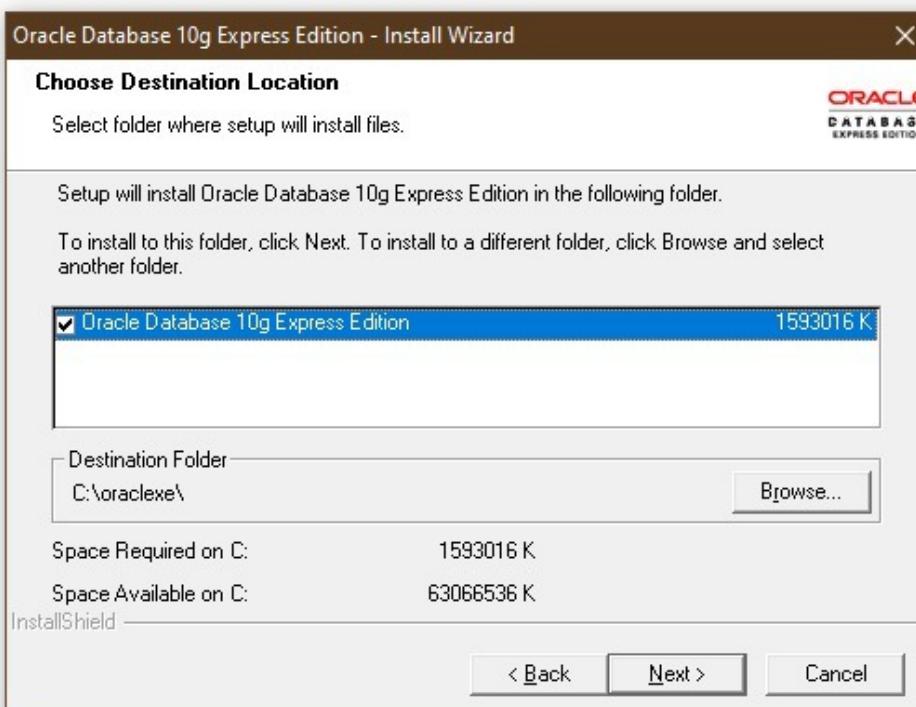

1. Download Oracle 10g from below link:
<https://drive.google.com/file/d/1Y6ghDOEfVorTNrzWgF1UKaENHjeGgrHG/view>
2. Start installation by opening the .exe file.

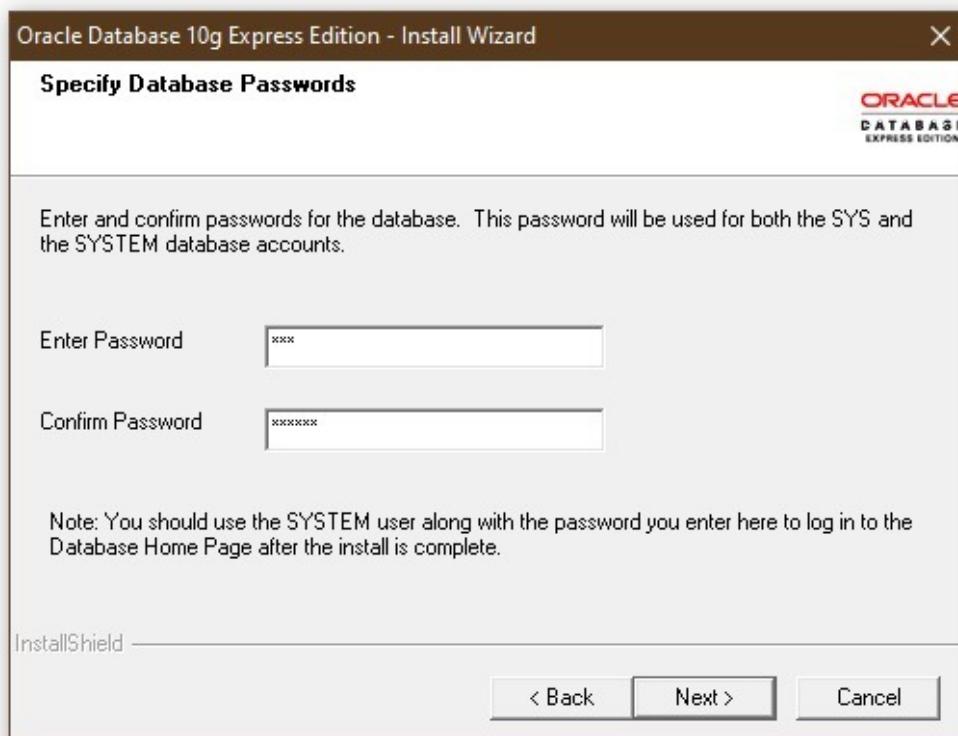

3. Click on next.

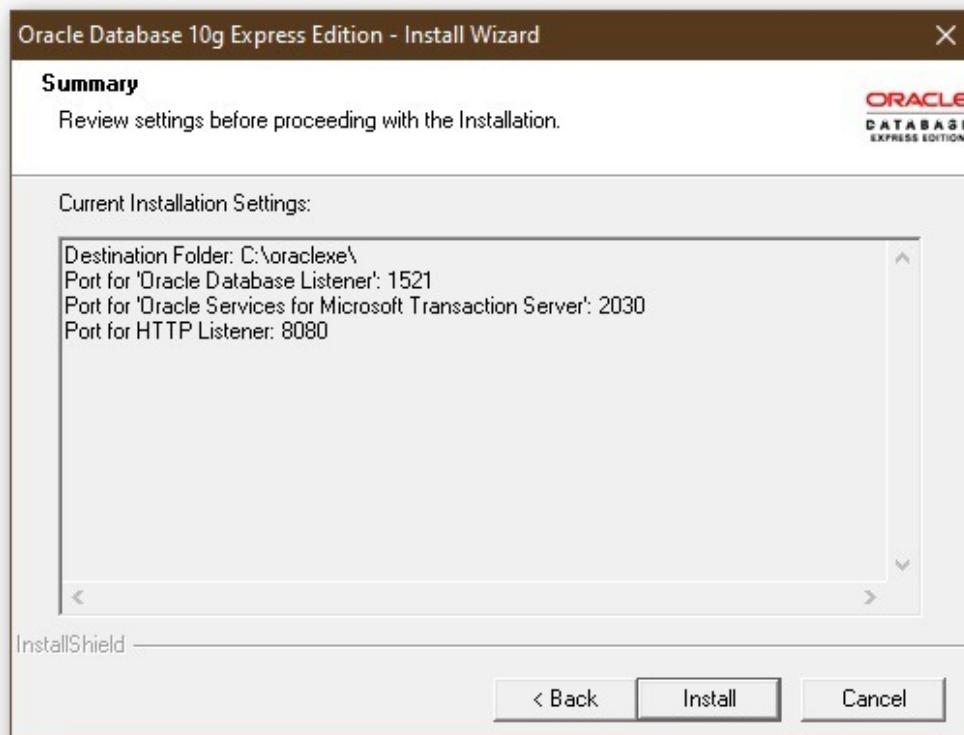

4. Select appropriate folder location and click Next.

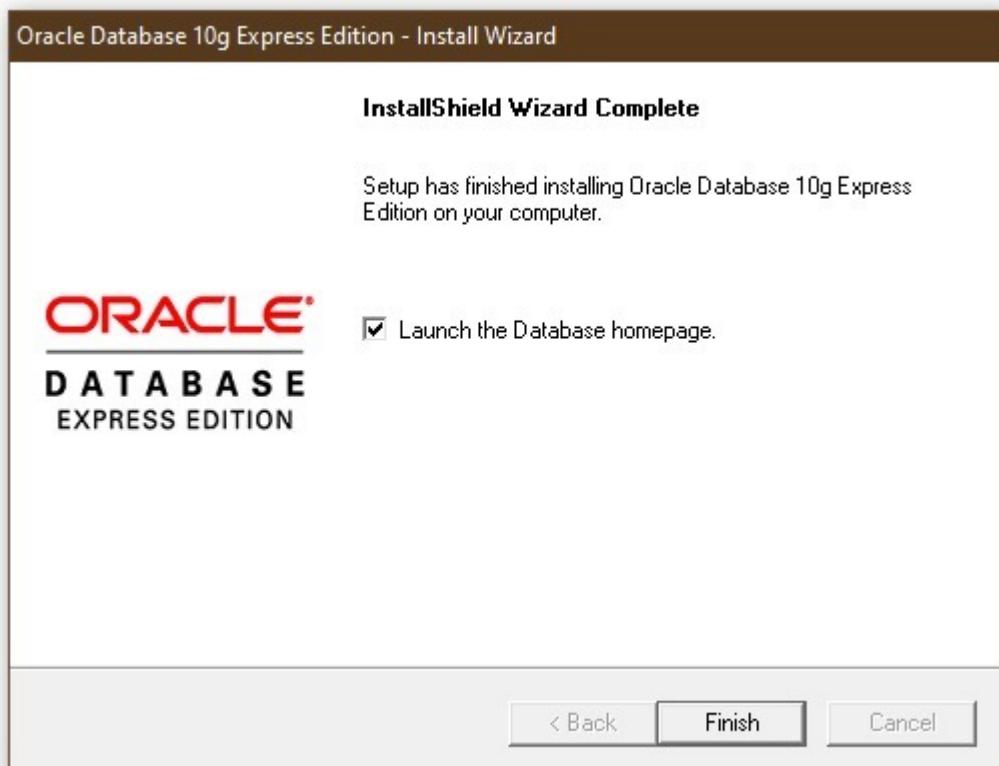

5. Enter a password of your choice and click Next.

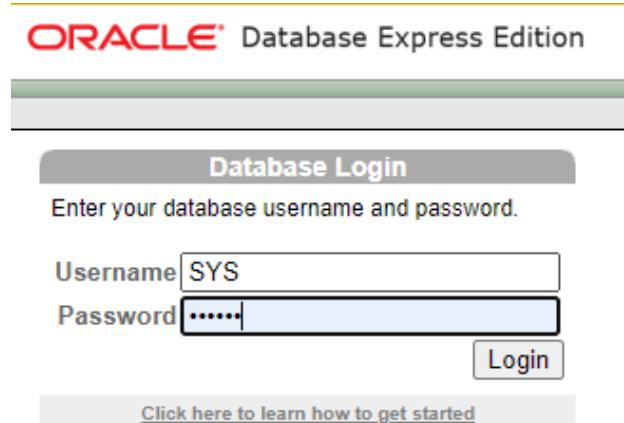

6. Click on Install.

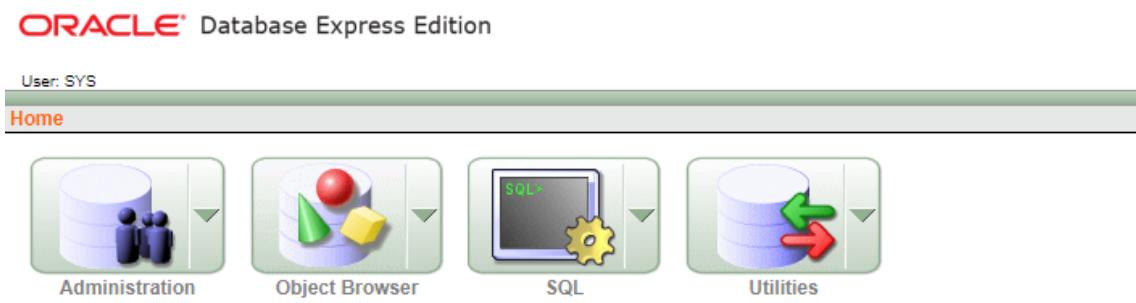

7. Click on finish.

8. Enter username “sys” or “system” and enter password from step 6.

9. Click on Administration.

10. Click on “database user dropdown button” and click “create user”. Enter college roll number in username and give password (NEW) and confirm password. Leave expire password unchecked, make account status unblocked if it, give all privileges to user and click on “create” button.

The screenshot shows the "Create Database User" dialog box. The "Username" field is set to "20DIT054", "Password" and "Confirm Password" fields both contain "*****", and the "Account Status" dropdown is set to "Unlocked". The "Default Tablespace" is "USERS" and the "Temporary Tablespace" is "TEMP". At the top right are "Cancel" and "Create" buttons. Below the dialog is a "User Privileges" section with two tables of checkboxes for roles and system privileges. The "Check All" and "Uncheck All" buttons are at the bottom right of the privileges section.

User Privileges		
Roles:	<input checked="" type="checkbox"/> CONNECT <input checked="" type="checkbox"/> RESOURCE <input type="checkbox"/> DBA	
Direct Grant System Privileges:	<input checked="" type="checkbox"/> CREATE DATABASE LINK <input checked="" type="checkbox"/> CREATE MATERIALIZED VIEW <input checked="" type="checkbox"/> CREATE PROCEDURE <input checked="" type="checkbox"/> CREATE PUBLIC SYNONYM <input checked="" type="checkbox"/> CREATE ROLE <input checked="" type="checkbox"/> CREATE SEQUENCE <input checked="" type="checkbox"/> CREATE SYNONYM <input checked="" type="checkbox"/> CREATE TABLE <input checked="" type="checkbox"/> CREATE TRIGGER <input checked="" type="checkbox"/> CREATE TYPE <input checked="" type="checkbox"/> CREATE VIEW	
Check All Uncheck All		

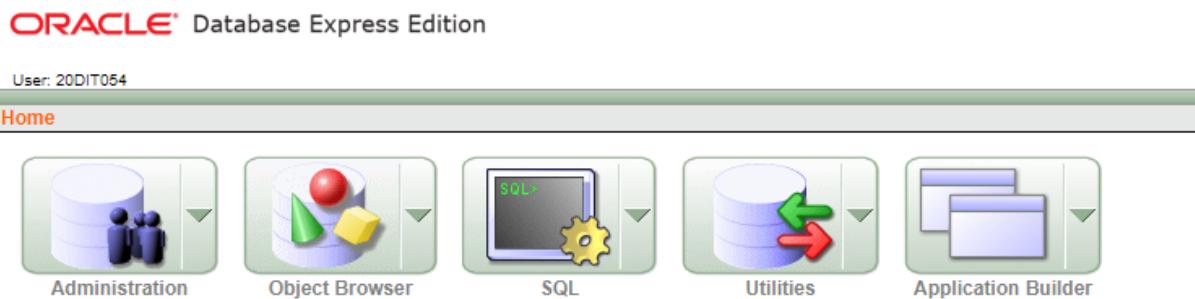

11. Click Logout button.

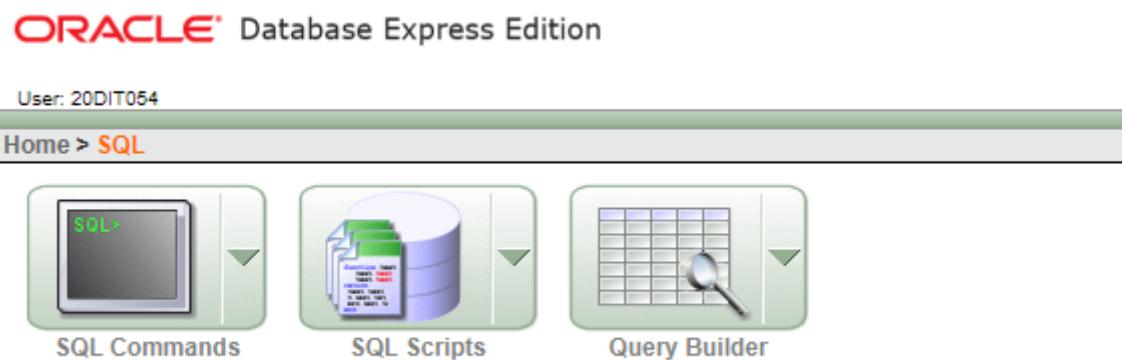

12. Enter username and password that you just created and click on “login” button.

A screenshot of the Oracle Database Express Edition login page. At the top, it says "ORACLE® Database Express Edition". Below that is a green horizontal bar. A grey button labeled "Database Login" is centered. Below it, the text "Enter your database username and password." is displayed. There are two input fields: "Username" containing "20DIT054" and "Password" containing a series of asterisks. To the right of the password field is a "Login" button. At the bottom, there is a link labeled "Click here to learn how to get started".

13. Click on SQL.

14. Click on SQL commands.

15. Oracle 10g is now set up and ready to use.

SQL:

- SQL stands for Structured Query Language. It helps in accessing and manipulating databases.
- SQL is a domain-specific language used in programming and designed for managing data held in a relational database management system.
- SQL is the standard language for Relational Database System. All the Relational Database Management Systems (RDMS) like MySQL, MS Access, Oracle, Sybase, Informix, Postgres and SQL Server use SQL as their standard database language.

PL/SQL:

- PL/SQL is a combination of SQL along with the procedural features of programming languages.
- PL/SQL was developed by Oracle Corporation in the early 90's to enhance the capabilities of SQL.
- PL/SQL is one of three key programming languages embedded in the Oracle Database, along with SQL itself and Java.

Conclusion:

From this practical, I learnt how to install Oracle 10g and create a user on it.

Practical-3

Aim: To study DDL-create and DML-insert commands.

(i) Create tables according to the following definition.

- CREATE TABLE DEPOSIT (ACTNO VARCHAR2(5), CNAME VARCHAR2(18), BNAME VARCHAR2(18), AMOUNT NUMBER (8,2), ADATE DATE);
- CREATE TABLE BRANCH (BNAME VARCHAR2(18), CITY VARCHAR2(18));
- CREATE TABLE CUSTOMERS (CNAME VARCHAR2(19), CITY VARCHAR2(18));
- CREATE TABLE BORROW (LOANNO VARCHAR2(5), CNAME VARCHAR2(18), BNAME VARCHAR2(18), AMOUNT NUMBER (8,2));

(ii) Insert the data as shown below

DEPOSIT

ACTNO	CNAME	BNAME	AMOUNT	ADATE
100	ANIL	VRCE	1000.00	1-MAR-95
101	SUNIL	AJNI	5000.00	4-JAN-96
102	MEHUL	KAROLBAGH	3500.00	17-NOV-95
104	MADHURI	CHANDI	1200.00	17-DEC-95
105	PRMOD	M.G.ROAD	3000.00	27-MAR-96
106	SANDIP	ANDHERI	2000.00	31-MAR-96
107	SHIVANI	VIRAR	1000.00	5-SEP-95
108	KRANTI	NEHRU PLACE	5000.00	2-JUL-95
109	MINU	POWAI	7000.00	10-AUG-95

BRANCH

BNAME	CITY
VRCE	NAGPUR
AJNI	NAGPUR
KAROLBAGH	DELHI
CHANDI	DELHI
DHARAMPETH	NAGPUR
M.G.ROAD	BANGLORE
ANDHERI	BOMBAY

3 rows returned in 0.06 seconds [CSV Export](#)

(9) Give name of customers who opened account after date '1-12-95'.

User: 20DIT054

Home > SQL > **SQL Commands**

Autocommit Display 10

```
SELECT * FROM DEPOSIT WHERE (ADATE > '1-DEC-95');
```

Results Explain Describe Saved SQL History

ACTNO	CNAME	BNAME	AMOUNT	ADATE
101	SUNIL	AJNI	5000	04-JAN-96
104	MADHURI	CHANDI	1200	17-DEC-95
105	PRMOD	M.G ROAD	3000	27-MAR-96
106	SANDIP	ANDHERI	2000	31-MAR-96
107	SHIVANI	VIRAR	1000	05-SEP-96

5 rows returned in 0.05 seconds [CSV Export](#)

(10) Give name of city where branch karolbagh is located.

User: 20DIT054

Home > SQL > **SQL Commands**

Autocommit Display 10

```
SELECT CITY FROM BRANCH WHERE BNAME='KAROLBAGH';
```

Results Explain Describe Saved SQL History

CITY
DELHI

1 rows returned in 0.00 seconds [CSV Export](#)

(11) Give account no and amount of customer having account opened between date 1-12-95 and 1-6-96.

User: 20DIT054

Home > SQL > **SQL Commands**

Autocommit Display 10

```
SELECT ACTNO, AMOUNT FROM DEPOSIT WHERE ADATE BETWEEN '1-DEC-95' AND '1-JUN-96';
```

Results Explain Describe Saved SQL History

ACTNO	AMOUNT
101	5000
104	1200
105	3000
106	2000

4 rows returned in 0.00 seconds [CSV Export](#)

(12) Give names of depositors having account at VRCE.

User: 20DIT054

Home > SQL > **SQL Commands**

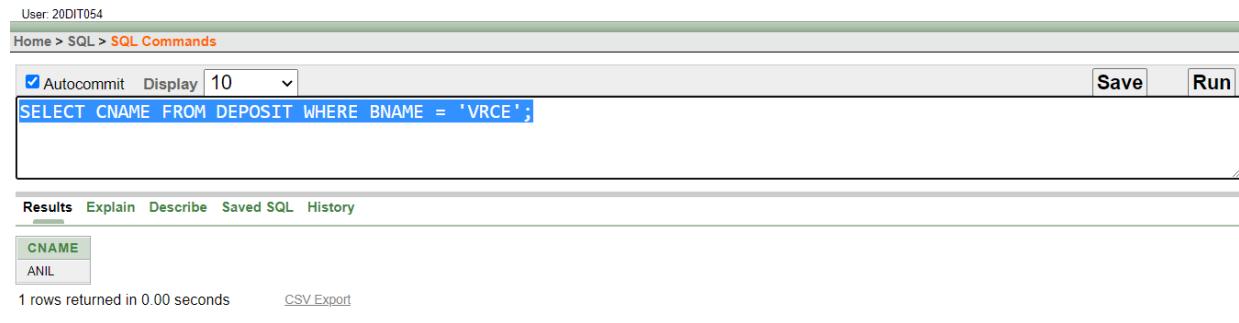

Autocommit Display 10

SELECT CNAME FROM DEPOSIT WHERE BNAME = 'VRCE';

Results Explain Describe Saved SQL History

CNAME
ANIL

1 rows returned in 0.00 seconds [CSV Export](#)

The screenshot shows a MySQL command-line interface. The user is 20DIT054. The current page is 'SQL Commands'. A query is being run: 'SELECT CNAME FROM DEPOSIT WHERE BNAME = 'VRCE';'. The results are displayed in a table with one row, 'ANIL', under the column 'CNAME'. Below the table, it says '1 rows returned in 0.00 seconds' and has a 'CSV Export' link.

Conclusion:

From this practical I learned how to fetch data from table and learned different type of DDL and DML commands.

Practical-4

Aim: Create the below given table and insert the data accordingly.

Create Table **Job** (job_id, job_title, min_sal, max_sal)

COLUMN NAME	DATA TYPE
job_id	Varchar2(15)
job_title	Varchar2(30)
min_sal	Number(7,2)
max_sal	Number(7,2)

Create table **Employee** (emp_no, emp_name, emp_sal, emp_comm, dept_no, l_name, dept_name, job_id, location, manager_id, hiredate)

COLUMN NAME	DATA TYPE
emp_no	Number(3)
emp_name	Varchar2(30)
emp_sal	Number(8,2)
emp_comm	Number(6,1)
dept_no	Number(3)
l_name	Varchar2(30)
dept_name	Varchar2(30)
job_id	Varchar2(15)
location	Varchar2(15)
manager_id	Number(5)
hiredate	Date

Create table **deposit**(a_no,cname,bname,amount,a_date).

COLUMN NAME	DATA TYPE
a_no	Varchar2(5)
cname	Varchar2(15)
bname	Varchar2(10)
amount	Number(7,2)
a_date	Date

Create table **borrow** (loanno, cname, bname, amount).

COLUMN NAME	DATA TYPE
loanno	Varchar2(5)
cname	Varchar2(15)
bname	Varchar2(10)
amount	Varchar2(7,2)

Insert following values in the table **Employee**.

emp_no	emp_name	emp_sal	emp_comm	dept_no	l_name	dept_name	job_id	location	Manager_id	Hire_date
101	Smith	800		20	shah	machine learning	fi_mgr	toronto	105	09-aug-96
102	Snehal	1600	300	25	gupta	data science	lec	las vegas		14-mar-96
103	Adama	1100	0	20	wales	machine learning	mk_mgr	ontario	105	30-nov-95
104	Aman	3000		15	sharma	virtual reality	comp_op	mexico	12	02-oct-97
105	Anita	5000	50,000	10	patel	big data analytics	comp_op	germany	107	01-jan-98
106	Sneha	2450	24,500	10	joseph	big data analytics	fi_acc	melbourne	105	26-sep-97
107	Anamika	2975		30	jha	artificial intelligence	it_prog	new york		15jul-97

Insert following values in the table **Job**.

job_id	job_name	min_sal	max_sal
it_prog	Programmer	4000	10000
mk_mgr	Marketing manager	9000	15000
fi_mgr	Finance manager	8200	12000
fi_acc	Account	4200	9000
lec	Lecturer	6000	17000
comp_op	Computer Operator	1500	3000

Insert following values in the table **deposit**.

A_no	cname	Bname	Amount	date
101	Anil	andheri	7000	01-jan-06
102	sunil	virar	5000	15-jul-06
103	jay	villeparle	6500	12-mar-06
104	vijay	andheri	8000	17-sep-06
105	keyur	dadar	7500	19-nov-06
106	mayur	borivali	5500	21-dec-06

Code:**CREATE TABLE:****Creating Job table:**

Conclusion :

We learn about various data manipulation commands and sorting concept on all created tables.

Practical-6

Aim: To study Single-row functions.

Queries :

(1) Write a query to display the current date. Label the column Date

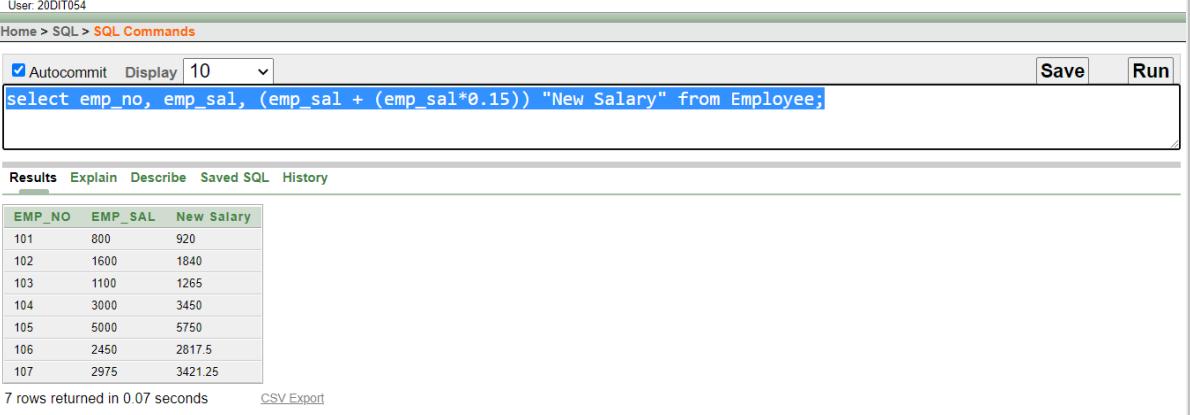

User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10
select sysdate from dual;

Results Explain Describe Saved SQL History
SYSDATE
06-FEB-22
1 rows returned in 0.02 seconds [CSV Export](#)

(2) For each employee, display the employee number, salary, and salary increased by 15% and expressed as a whole number.

Label the column New Salary

User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10
select emp_no, emp_sal, (emp_sal + (emp_sal*0.15)) "New Salary" from Employee;

Results Explain Describe Saved SQL History
EMP_NO EMP_SAL New Salary
101 800 920
102 1600 1840
103 1100 1265
104 3000 3450
105 5000 5750
106 2450 2817.5
107 2975 3421.25
7 rows returned in 0.07 seconds [CSV Export](#)

(3) Modify your query no (2) to add a column that subtracts the old salary from the new salary. Label the column Increase

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
select emp_no, emp_sal, (emp_sal + (emp_sal*0.15)) "New Salary", (emp_sal + (emp_sal*0.15) - emp_sal) "Increase" from Employee;
```

Results Explain Describe Saved SQL History

EMP_NO	EMP_SAL	New Salary	Increase
101	800	920	120
102	1600	1840	240
103	1100	1265	165
104	3000	3450	450
105	5000	5750	750
106	2450	2817.5	367.5
107	2975	3421.25	446.25

7 rows returned in 0.01 seconds [CSV Export](#)

(4) Write a query that displays the employee's names with the first letter capitalized and all other letters lowercase, and the length of the names, for all employees whose name starts with J, A, or M. Give each column an appropriate label. Sort the results by the employees' last names.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
select initcap(emp_name) "Employee_Name", LENGTH(emp_name) "Length" from Employee where emp_name LIKE 'J%' or emp_name LIKE 'A%' or emp_name LIKE 'M%' order by emp_name;
```

Results Explain Describe Saved SQL History

Employee_Name	Length
Aman	4
Anamika	7
Anita	5

3 rows returned in 0.06 seconds [CSV Export](#)

(5) Write a query that produces the following for each employee:

<employee last name> earns <salary> monthly

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
select concat(concat(emp_name, ' earns '), concat(emp_sal, ' monthly')) "Data" from Employee;
```

Results Explain Describe Saved SQL History

Data
Smith earns 800 monthly
Snehal earns 1600 monthly
Dhruvin earns 1100 monthly
Aman earns 3000 monthly
Anita earns 5000 monthly
Sneha earns 2450 monthly
Anamika earns 2975 monthly

7 rows returned in 0.01 seconds [CSV Export](#)

(6) Display the name, date, number of months employed and day of the week on which the employee has started. Order the results by the day of the week starting with Monday.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
select emp_name, hiredate, round(months_between(sysdate, hiredate)) "Months Employed", to_char(hiredate, 'DAY') "Day of Week" from Employee order by (hiredate - next_day(hiredate, 'MONDAY'));
```

Results Explain Describe Saved SQL History

EMP_NAME	HIREDATE	Months Employed	Day Of Week
Anamika	15-JUL-97	295	TUESDAY
Dhruvin	30-NOV-95	314	THURSDAY
Snehal	14-MAR-96	311	THURSDAY
Aman	02-OCT-97	292	THURSDAY
Anita	01-JAN-98	289	THURSDAY
Sneha	26-SEP-97	292	FRIDAY
Smith	09-AUG-96	306	FRIDAY

7 rows returned in 0.00 seconds [CSV Export](#)

(7) Display the date of emp in a format that appears as Seventh of June 1994 12:00:00 AM.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
select to_char(hiredate, 'DDSPTH " of " MON YYYY hh:mi:ss AM') from Employee;
```

Results Explain Describe Saved SQL History

TO_CHAR(HIREDATE,'DDSPTH"OF"MONYYYYHH:MI:SSAM')
NINTH of AUG 1996 12:00:00 AM
FOURTEENTH of MAR 1996 12:00:00 AM
THIRTIETH of NOV 1995 12:00:00 AM
SECOND of OCT 1997 12:00:00 AM
FIRST of JAN 1998 12:00:00 AM
TWENTY-SIXTH of SEP 1997 12:00:00 AM
FIFTEENTH of JUL 1997 12:00:00 AM

7 rows returned in 0.00 seconds [CSV Export](#)

(8) Write a query to calculate the annual compensation of all employees (sal +comm.).

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
select emp_name,emp_sal+emp_comm "compensation" from employee;
```

Results Explain Describe Saved SQL History

EMP_NAME	Compensation
Smith	-
Snehal	1900
Dhruvin	1600
Aman	-
Anita	55000
Sneha	26950
Anamika	-

7 rows returned in 0.02 seconds [CSV Export](#)

Conclusion :

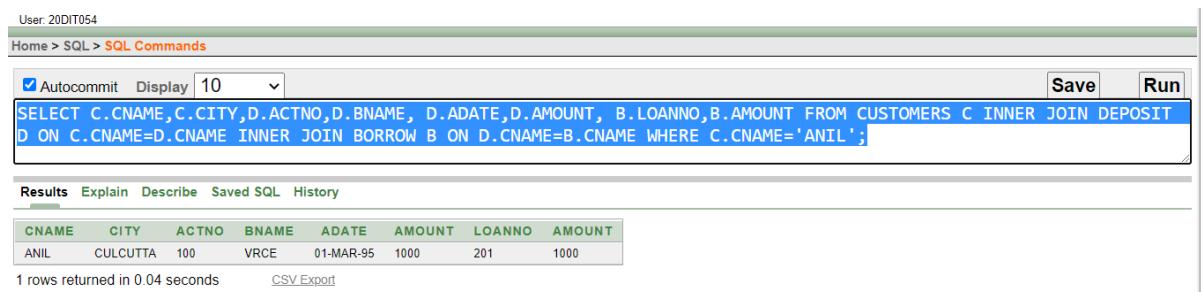

In this practical I learned about different types of single row functions.

Practical-7

Aim: Displaying data from Multiple Tables (join)

Queries :

(1) Give details of customers ANIL.

User: 20DIT054
Home > SQL > SQL Commands
 Autocommit

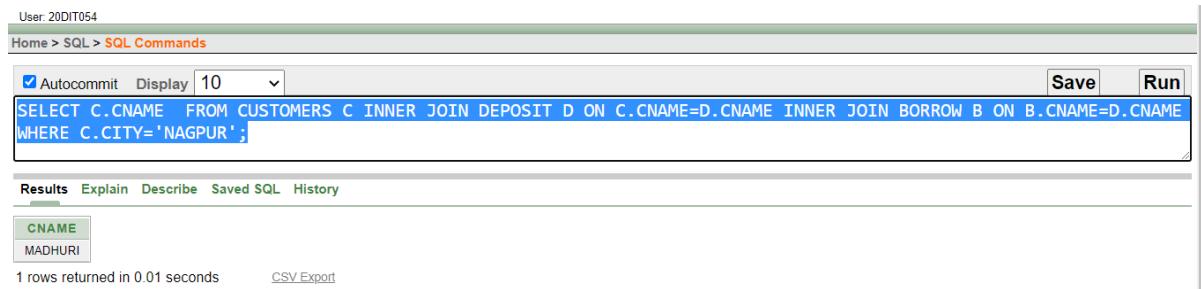

```
SELECT C.CNAME, C.CITY, D.ACTNO, D.BNAME, D.ADATE, D.AMOUNT, B.LOANNO, B.AMOUNT FROM CUSTOMERS C INNER JOIN DEPOSIT D ON C.CNAME=D.CNAME INNER JOIN BORROW B ON D.CNAME=B.CNAME WHERE C.CNAME='ANIL';
```

Results Explain Describe Saved SQL History

CNAME	CITY	ACTNO	BNAME	ADATE	AMOUNT	LOANNO	AMOUNT
ANIL	CULCUTTA	100	VRCE	01-MAR-95	1000	201	1000

1 rows returned in 0.04 seconds [CSV Export](#)

(2) Give name of customer who are borrowers and depositors and having living city Nagpur

User: 20DIT054
Home > SQL > SQL Commands
 Autocommit

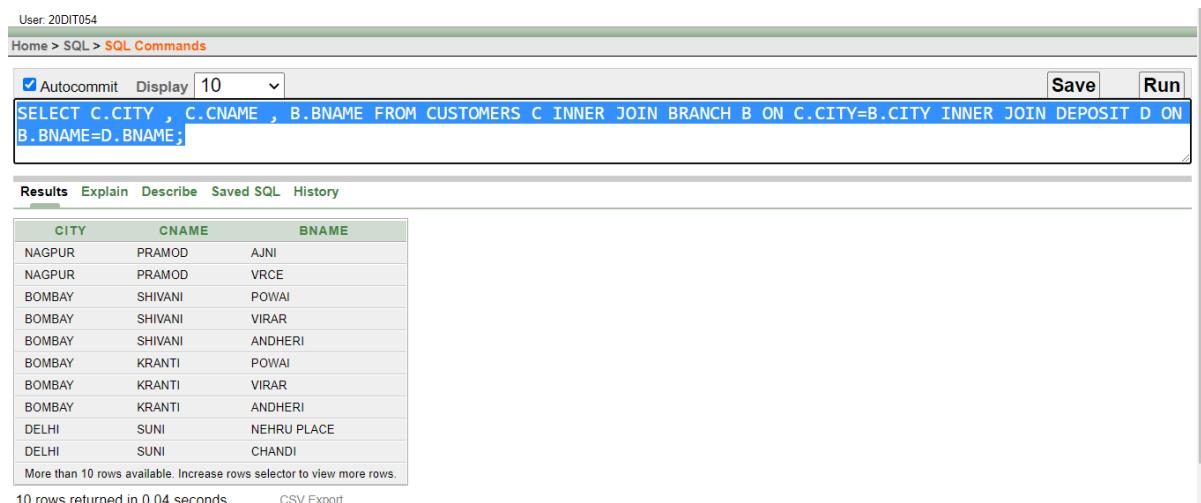

```
SELECT C.CNAME FROM CUSTOMERS C INNER JOIN DEPOSIT D ON C.CNAME=D.CNAME INNER JOIN BORROW B ON B.CNAME=D.CNAME WHERE C.CITY='NAGPUR';
```

Results Explain Describe Saved SQL History

CNAME
MADHURI

1 rows returned in 0.01 seconds [CSV Export](#)

(3) Give city as their city name of customers having same living branch.

User: 20DIT054
Home > SQL > SQL Commands
 Autocommit

```
SELECT C.CITY, C.CNAME, B.BNAME FROM CUSTOMERS C INNER JOIN BRANCH B ON C.CITY=B.CITY INNER JOIN DEPOSIT D ON B.BNAME=D.BNAME;
```

Results Explain Describe Saved SQL History

CITY	CNAME	BNAME
NAGPUR	PRAMOD	AJNI
NAGPUR	PRAMOD	VRCE
BOMBAY	SHIVANI	POWAI
BOMBAY	SHIVANI	VIRAR
BOMBAY	SHIVANI	ANDHERI
BOMBAY	KRANTI	POWAI
BOMBAY	KRANTI	VIRAR
BOMBAY	KRANTI	ANDHERI
DELHI	SUNI	NEHRU PLACE
DELHI	SUNI	CHANDI

More than 10 rows available. Increase rows selector to view more rows.
1 rows returned in 0.04 seconds [CSV Export](#)

(4) Write a query to display the last name, department number, and department name for all employees.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT EMP_NAME,DEPT_NAME,DEPT_NO FROM EMPLOYEE;
```

Results Explain Describe Saved SQL History

EMP_NAME	DEPT_NAME	DEPT_NO
Smith	machine learning	10
Snehal	data science	25
Dhruvin	machine learning	20
Aman	virtual reality	10
Anita	big data analytics	10
Sneha	big data analytics	10
Anamika	artificial intelligence	30

7 rows returned in 0.02 seconds [CSV Export](#)

(5) Create a unique listing of all jobs that are in department 30. Include the location of the department in the output

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT EMPLOYEE.JOB_ID,EMPLOYEE.LOCATION,JOB.JOB_TITLE FROM EMPLOYEE JOIN JOB ON EMPLOYEE.JOB_ID=JOB.JOB_ID WHERE DEPT_NO='30';
```

Results Explain Describe Saved SQL History

JOB_ID	LOCATION	JOB_TITLE
it_prog	new york	Programmer

1 rows returned in 0.03 seconds [CSV Export](#)

(6) Write a query to display the employee name, department number, and department name for all employees who work in NEW YORK.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

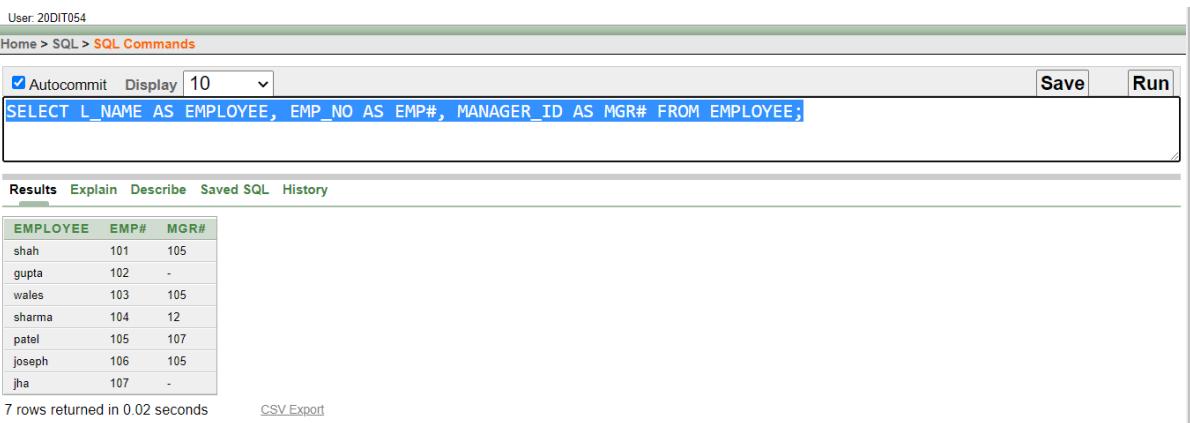

```
SELECT emp_name,dept_no,dept_name FROM EMPLOYEE WHERE LOCATION='new york';
```

Results Explain Describe Saved SQL History

EMP_NAME	DEPT_NO	DEPT_NAME
Anamika	30	artificial intelligence

1 rows returned in 0.00 seconds [CSV Export](#)

(7) Display the employee last name and employee number along with their manager's last name and manager number. Label the columns Employee, Emp#, Manager, and Mgr#, respectively.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

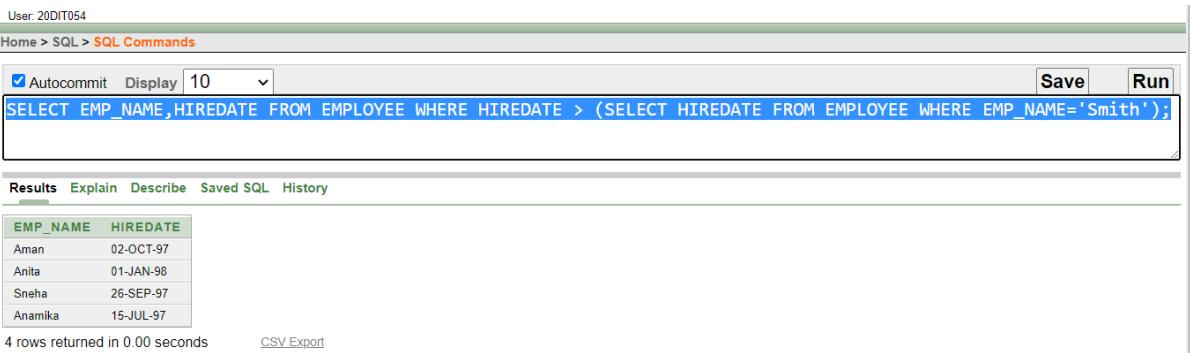

```
SELECT L_NAME AS EMPLOYEE, EMP_NO AS EMP#, MANAGER_ID AS MGR# FROM EMPLOYEE;
```

Results Explain Describe Saved SQL History

EMPLOYEE	EMP#	MGR#
shah	101	105
gupta	102	-
wales	103	105
sharma	104	12
patel	105	107
joseph	106	105
jha	107	-

7 rows returned in 0.02 seconds [CSV Export](#)

(8) Create a query to display the name and hire date of any employee hired after employee "smith".

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT EMP_NAME, HIREDATE FROM EMPLOYEE WHERE HIREDATE > (SELECT HIREDATE FROM EMPLOYEE WHERE EMP_NAME='Smith');
```

Results Explain Describe Saved SQL History

EMP_NAME	HIREDATE
Aman	02-OCT-97
Anita	01-JAN-98
Sneha	26-SEP-97
Anamika	15-JUL-97

4 rows returned in 0.00 seconds [CSV Export](#)

Conclusion :

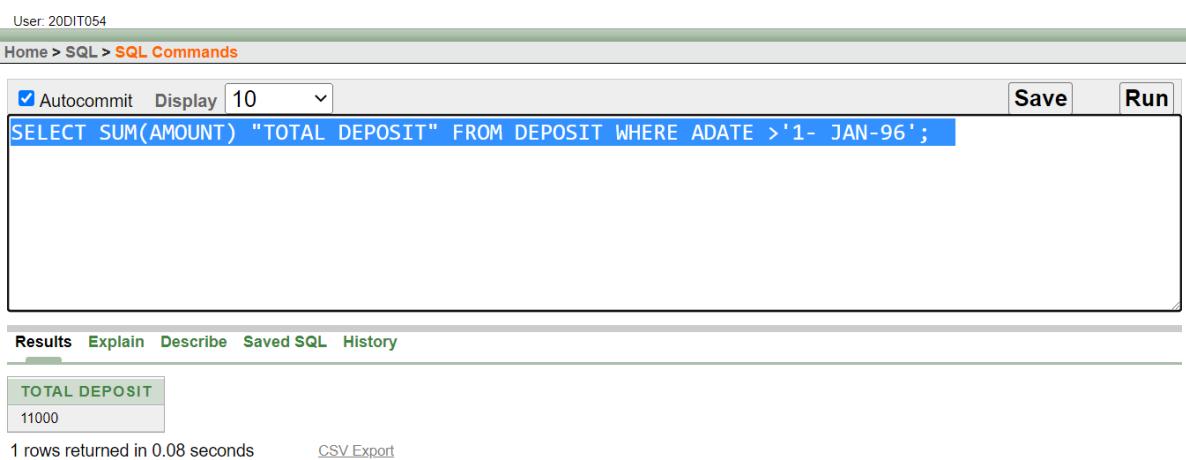

In this practical I learned about how to fetch data from multiple tables.

Practical-8

Aim: To apply the concept of Aggregating Data using Group functions.

Queries :

(1) List total deposit of customer having account date after 1-jan-96.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

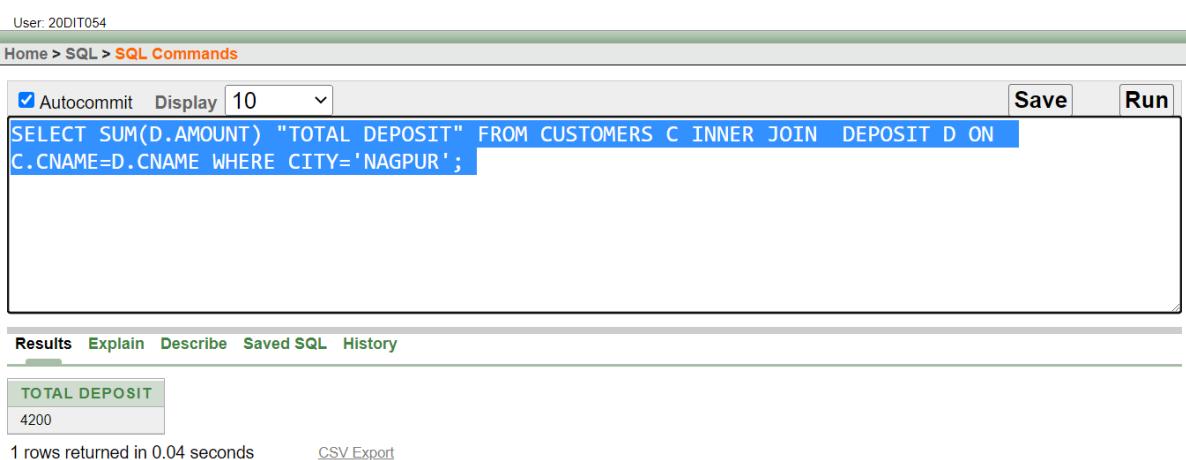

```
SELECT SUM(AMOUNT) "TOTAL DEPOSIT" FROM DEPOSIT WHERE ADATE > '1- JAN-96';
```

[Results](#) [Explain](#) [Describe](#) [Saved SQL](#) [History](#)

TOTAL DEPOSIT
11000

1 rows returned in 0.08 seconds [CSV Export](#)

(2) List total deposit of customers living in city Nagpur.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT SUM(D.AMOUNT) "TOTAL DEPOSIT" FROM CUSTOMERS C INNER JOIN DEPOSIT D ON C.CNAME=D.CNAME WHERE CITY='NAGPUR';
```

[Results](#) [Explain](#) [Describe](#) [Saved SQL](#) [History](#)

TOTAL DEPOSIT
4200

1 rows returned in 0.04 seconds [CSV Export](#)

(3) List maximum deposit of customers living in bombay.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT MAX(D.AMOUNT) "MAX. DEPOSIT" FROM CUSTOMERS C INNER JOIN DEPOSIT D ON C.CNAME=D.CNAME WHERE CITY='BOMBAY';
```

Results Explain Describe Saved SQL History

MAX. DEPOSIT
5000

1 rows returned in 0.00 seconds [CSV Export](#)

(4) Display the highest, lowest, sum, and average salary of all employees. Label the columns Maximum, Minimum, Sum, and Average, respectively. Round your results to the nearest whole number.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT ROUND (AVG(EMP_SAL)) "AVERAGE", (MAX(EMP_SAL)) "MAXIMUM" , (MIN(EMP_SAL)) "MINIMUM", (SUM(EMP_SAL)) "SUM" FROM EMPLOYEE;
```

Results Explain Describe Saved SQL History

AVERAGE	MAXIMUM	MINIMUM	SUM
2418	5000	800	16925

1 rows returned in 0.05 seconds [CSV Export](#)

(5) Write a query that displays the difference between the highest and lowest salaries. Label the column DIFFERENCE.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT (MAX(EMP_SAL) - MIN(EMP_SAL)) "DIFFERENCE" FROM EMPLOYEE;
```

Results Explain Describe Saved SQL History

DIFFERENCE
4200

1 rows returned in 0.00 seconds [CSV Export](#)

(6) Create a query that will display the total number of employees and, of that total, the number of employees hired in 1995, 1996, 1997, and 1998

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT COUNT (EMP_SAL) "TOTAL EMP" FROM EMPLOYEE WHERE EXTRACT (YEAR FROM HIREDATE) = 1995
OR EXTRACT (YEAR FROM HIREDATE) = 2000;
```

Results Explain Describe Saved SQL History

TOTAL EMP
1

1 rows returned in 0.01 seconds [CSV Export](#)

(7) Find the average salaries for each department without displaying the respective department numbers.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT ROUND (AVG(EMP_SAL)) "AVG SAL" , DEPT_NO FROM EMPLOYEE GROUP BY DEPT_NO;
```

Results Explain Describe Saved SQL History

AVG SAL	DEPT NO
1600	25
2975	30
1100	20
2813	10

4 rows returned in 0.06 seconds [CSV Export](#)

(8) Write a query to display the total salary being paid to each job title, within each department.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT JOB_TITLE, ROUND(SUM(EMP_SAL)) "TOTAL SALARY" FROM EMPLOYEE NATURAL JOIN JOB GROUP BY JOB_TITLE;
```

Results Explain Describe Saved SQL History

JOB TITLE	TOTAL SALARY
Programmer	2975
Lecturer	1600
Computer Operator	8000
Account	2450
Finanace Manager	800
Marketing Manager	1100

6 rows returned in 0.04 seconds [CSV Export](#)

(9) Find the average salaries > 2000 for each department without displaying the respective department numbers.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT ROUND (AVG(EMP_SAL)) "SALARY" FROM EMPLOYEE WHERE (EMP_SAL>2000) GROUP BY DEPT_NO;
```

Results Explain Describe Saved SQL History

SALARY
2975
3483

2 rows returned in 0.00 seconds [CSV Export](#)

(10) Display the job and total salary for each job with a total salary amount exceeding 3000 and sorts the list by the total salary.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT JOB_TITLE , MAX_SAL FROM JOB WHERE MAX_SAL>3000 ORDER BY (MAX_SAL);
```

Results Explain Describe Saved SQL History

JOB_TITLE	MAX_SAL
Account	9000
Programmer	10000
Finanace Manager	12000
Marketing Manager	15000
Lecturer	17000

5 rows returned in 0.00 seconds [CSV Export](#)

(11) List the branches having sum of deposit more than 5000 and located in city bombay.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
select deposit.bname from deposit join branch on deposit.bname = branch.bname where branch.city = 'BOMBAY' group by deposit.bname having sum(deposit.amount)>500;
```

Results Explain Describe Saved SQL History

BNAME
POWAI

1 rows returned in 0.02 seconds [CSV Export](#)

Conclusion :

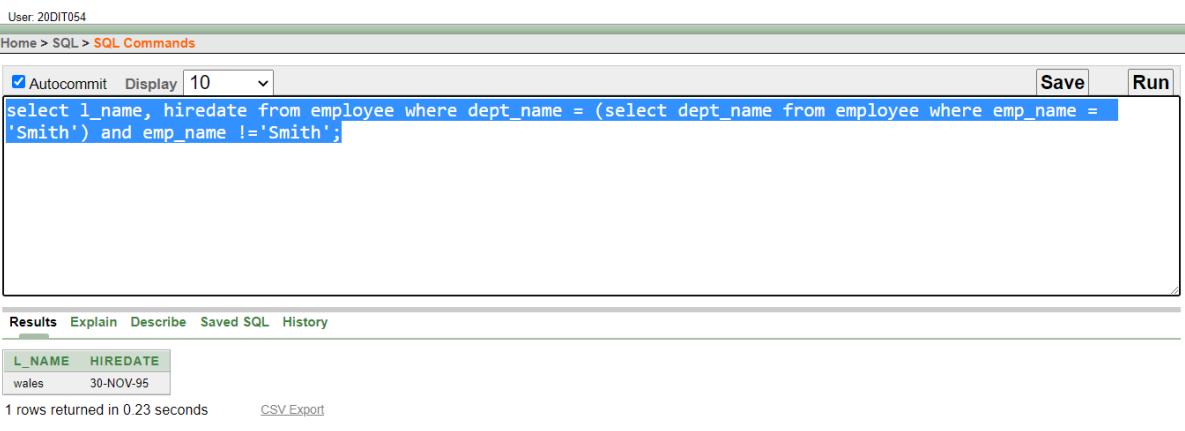

In this practical I learned about concept of Aggregating Data using Group functions.

Practical-9

Aim: To solve queries using the concept of sub query.

Queries :

(1) Write a query to display the last name and hire date of any employee in the same department as smith. Exclude smith

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

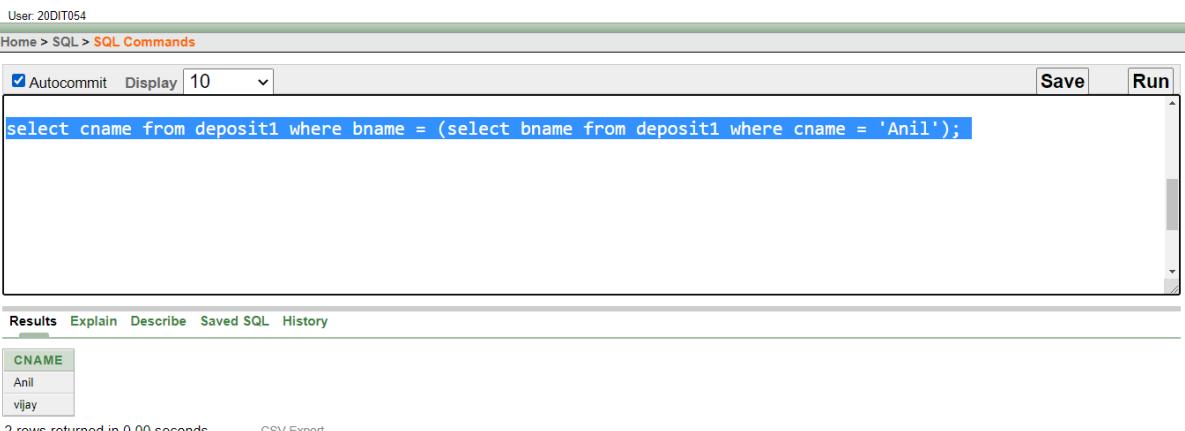

```
select l_name, hiredate from employee where dept_name = (select dept_name from employee where emp_name = 'Smith') and emp_name != 'Smith';
```

Results Explain Describe Saved SQL History

L_NAME	HIREDATE
wales	30-NOV-95

1 rows returned in 0.23 seconds [CSV Export](#)

(2) Give name of customers who are depositors having same branch city of mr. sunil.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
select cname from deposit1 where bname = (select bname from deposit1 where cname = 'Anil');
```

Results Explain Describe Saved SQL History

CNAME
Anil
vijay

2 rows returned in 0.00 seconds [CSV Export](#)

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
select cname from deposit join branch on deposit.bname = branch.bname where branch.city = (select branch.city
from branch join deposit on branch.bname = deposit.bname where deposit.cname = 'ANIL');
```

Results Explain Describe Saved SQL History

CNAME
ANIL
SUNIL

2 rows returned in 0.11 seconds [CSV Export](#)

(3) Give deposit details and loan details of customer in same city where pramod is living.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
select deposit.actno, deposit.amount "Deposit Amount", borrow.loanno, borrow.amount "Borrow Amount" from
deposit join borrow on deposit.cname = borrow.cname join customers on deposit.cname = customers.cname where
customers.city = (select city from customers where cname = 'PRAMOD');
```

Results Explain Describe Saved SQL History

ACTNO	Deposit Amount	LOANNO	Borrow Amount
104	1200	321	2000

1 rows returned in 0.04 seconds [CSV Export](#)

(4) Create a query to display the employee numbers and last names of all employees who earn more than the average salary. Sort the results in ascending order of salary.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
select emp_no, l_name from employee where emp_sal > (select AVG(emp_sal) from employee) order by emp_sal asc;
```

Results Explain Describe Saved SQL History

EMP_NO	L_NAME
106	joseph
107	jha
104	sharma
105	patel

4 rows returned in 0.05 seconds [CSV Export](#)

(5) Give names of depositors having same living city as mr. anil and having deposit amount greater than 2000

```
User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10 Save Run
select deposit.cname from deposit join branch on deposit.bname = branch.bname where deposit.amount > 2000 and branch.city = (select city from branch where bname = (select bname from deposit where cname = 'ANIL'));
```

Results Explain Describe Saved SQL History

CNAME
SUNIL

1 rows returned in 0.00 seconds CSV Export

(6) Display the last name and salary of every employee who reports to ford.

```
User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10 Save Run
select l_name, emp_sal from employee where manager_id = (Select emp_no from employee where emp_name = 'FORD');
```

Results Explain Describe Saved SQL History

no data found

(7) Display the department number, name, and job for every employee in the Accounting department.

```
User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10 Save Run
select employee.dept_no, employee.dept_name, job.job_title from employee join job on employee.job_id = job.job_id where job.job_title = 'Account';
```

Results Explain Describe Saved SQL History

DEPT_NO	DEPT_NAME	JOB_TITLE
10	big data analytics	Account

1 rows returned in 0.08 seconds CSV Export

(8) List the name of branch having highest number of depositors.

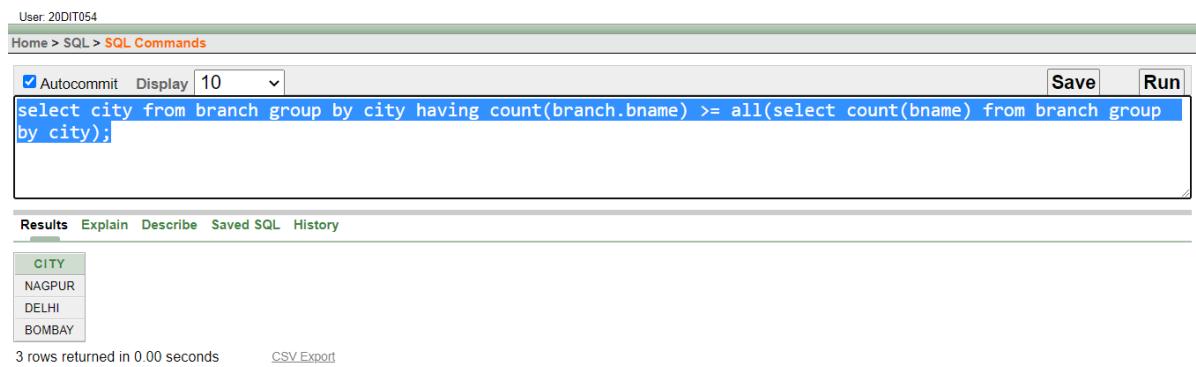

```
User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10 Save Run
select bname from deposit1 group by bname having count(bname) >= all(select count(bname) from deposit1 group by bname);
```

Results Explain Describe Saved SQL History

BNAME
andheri

1 rows returned in 0.06 seconds CSV Export

(9) Give the name of cities where in which the maximum numbers of branches are located.

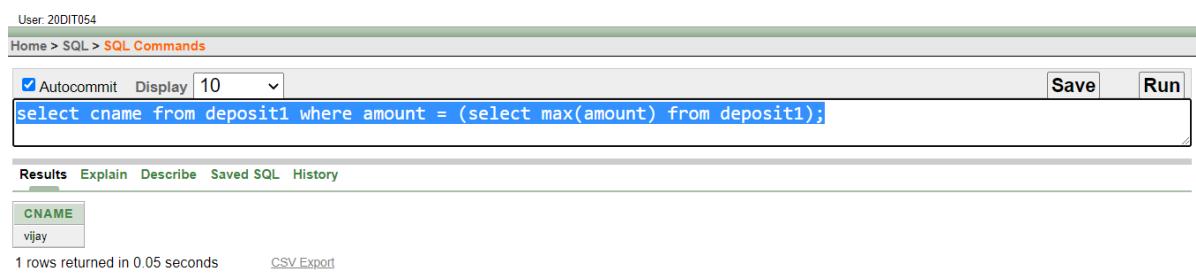

User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10
select city from branch group by city having count(branch.bname) >= all(select count(bname) from branch group by city);

Results Explain Describe Saved SQL History

CITY
NAGPUR
DELHI
BOMBAY

3 rows returned in 0.00 seconds [CSV Export](#)

(10) Give name of customers living in same city where maximum depositors are located.

User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10
select cname from deposit1 where amount = (select max(amount) from deposit1);

Results Explain Describe Saved SQL History

CNAME
vijay

1 rows returned in 0.05 seconds [CSV Export](#)

Conclusion :

From this practical we learn about sub queries.

Practical-10

Aim: Manipulating Data

Queries :

(1) Give 10% interest to all depositors.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
update deposit set amount = amount*10/100;
```

Results Explain Describe Saved SQL History

9 row(s) updated.
0.47 seconds

(2) Give 10% interest to all depositors having branch vrce

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
update deposit set amount = amount + (amount*10/100) where bname = 'VRCE';
```

Results Explain Describe Saved SQL History

1 row(s) updated.
0.04 seconds

(3) Give 10% interest to all depositors living in nagpur and having branch city bombay.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
SELECT AMOUNT+AMOUNT*0.1 FROM BORROW, BRANCH,CUSTOMERS WHERE BRANCH.BNAME=BORROW.BNAME AND  
BORROW.CNAME=CUSTOMERS.CNAME AND CUSTOMERS.CITY='NAGPUR' AND BRANCH.CITY='BOMBAY';
```

Results Explain Describe Saved SQL History

AMOUNT+AMOUNT*0.1
2200

1 rows returned in 0.16 seconds [CSV Export](#)

(4) Write a query which changes the department number of all employees with empno 7788's job to employee 7844'current department number.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
update employee set dept_no = (select dept_no from employee where emp_no = 7784) where emp_no = 7784;
```

Results Explain Describe Saved SQL History

0 row(s) updated.

(5) Transfer 10 Rs from account of anil to sunil if both are having same branch.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
update deposit set amount = amount - 10 where cname = 'ANIL' and bname = (select bname from deposit where cname = 'SUNIL');
```

Results Explain Describe Saved SQL History

0 row(s) updated.

0.00 seconds

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
update deposit set amount = amount + 10 where cname = 'SUNIL' and bname = (select bname from deposit where cname = 'ANIL');
```

Results Explain Describe Saved SQL History

0 row(s) updated.

(6) Give 100 Rs more to all depositors if they are maximum depositors in their respective branch.

User: 20DIT054

Home > SQL > SQL Commands

Autocommit Display 10

```
update deposit set amount = amount + 20 where cname = ANY(select cname from deposit where amount in (select max(amount) from deposit group by bname));
```

Results Explain Describe Saved SQL History

9 row(s) updated.

(7) Delete depositors of branches having number of customers between 1 to 3.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
delete from deposit where bname in(select bname from deposit group by bname having count(bname)>1 and count(bname)<3);
```

Results Explain Describe Saved SQL History

0 row(s) deleted.

(8) Delete deposit of vijay.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
delete from deposit where cname= 'VIJAY';
```

Results Explain Describe Saved SQL History

0 row(s) deleted.
0.00 seconds

(9) Delete borrower of branches having average loan less than 1000.

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
delete from borrow where 1000>any(select avg(amount) from borrow group by bname);
```

Results Explain Describe Saved SQL History

0 row(s) deleted.

Conclusion :

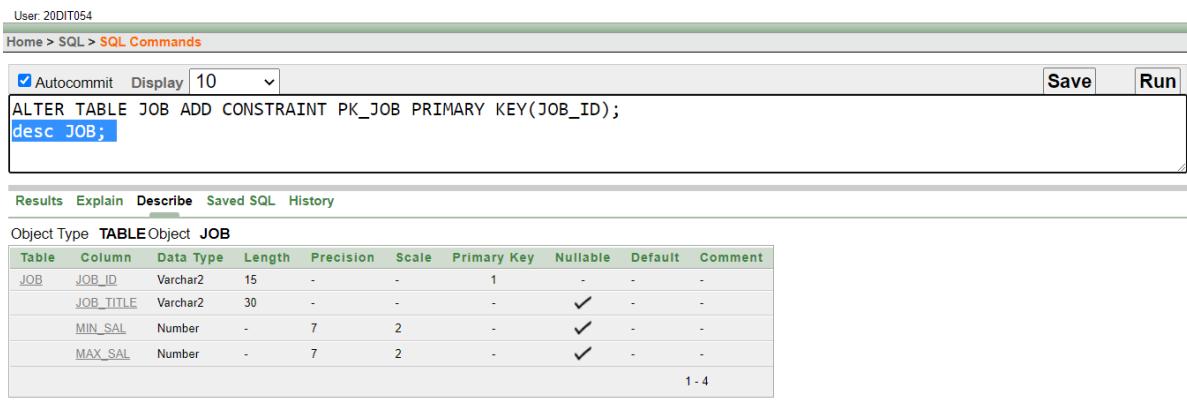

From this practical we learn about manipulating of data.

Practical-11

Aim: Add and Remove constraint

Queries :

(1) Add primary key constraint on job_id in job table.

```
User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10  
ALTER TABLE JOB ADD CONSTRAINT PK_JOB PRIMARY KEY(JOB_ID);
desc JOB;
```

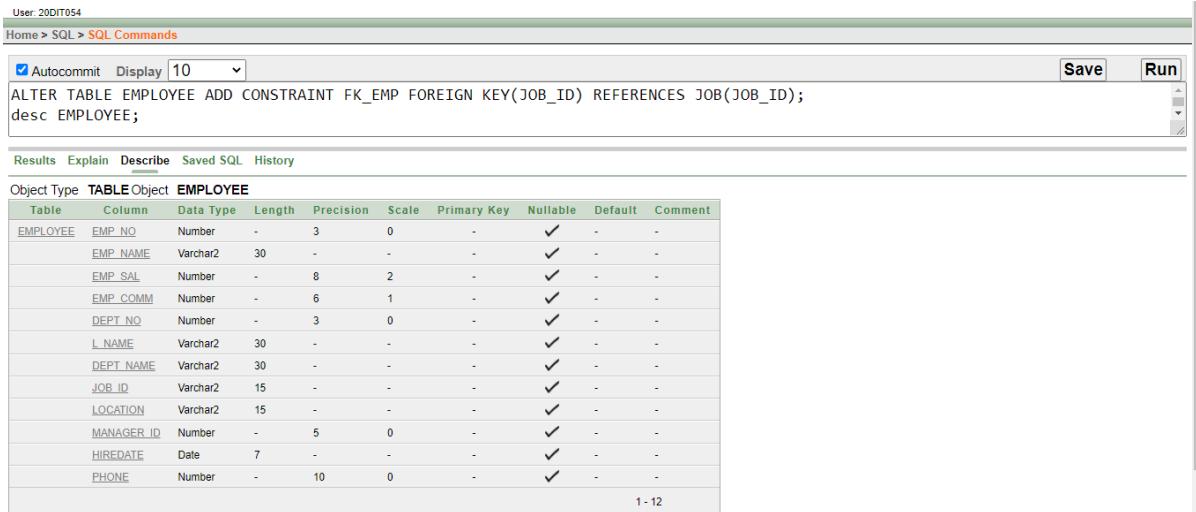

Results Explain Describe Saved SQL History

Object Type TABLE Object JOB

Table	Column	Data Type	Length	Precision	Scale	Primary Key	Nullable	Default	Comment
JOB	JOB_ID	Varchar2	15	-	-	1	-	-	-
	JOB_TITLE	Varchar2	30	-	-	-	✓	-	-
	MIN_SAL	Number	-	7	2	-	✓	-	-
	MAX_SAL	Number	-	7	2	-	✓	-	-

1 - 4

(2) Add foreign key constraint on employee table referencing job table.

```
User: 20DIT054
Home > SQL > SQL Commands
 Autocommit Display 10  
ALTER TABLE EMPLOYEE ADD CONSTRAINT FK_EMP FOREIGN KEY(JOB_ID) REFERENCES JOB(JOB_ID);
desc EMPLOYEE;
```

Results Explain Describe Saved SQL History

Object Type TABLE Object EMPLOYEE

Table	Column	Data Type	Length	Precision	Scale	Primary Key	Nullable	Default	Comment
EMPLOYEE	EMP_NO	Number	-	3	0	-	✓	-	-
	EMP_NAME	Varchar2	30	-	-	-	✓	-	-
	EMP_SAL	Number	-	8	2	-	✓	-	-
	EMP_COMM	Number	-	6	1	-	✓	-	-
	DEPT_NO	Number	-	3	0	-	✓	-	-
	L_NAME	Varchar2	30	-	-	-	✓	-	-
	DEPT_NAME	Varchar2	30	-	-	-	✓	-	-
	JOB_ID	Varchar2	15	-	-	-	✓	-	-
	LOCATION	Varchar2	15	-	-	-	✓	-	-
	MANAGER_ID	Number	-	5	0	-	✓	-	-
	HIREDATE	Date	7	-	-	-	✓	-	-
	PHONE	Number	-	10	0	-	✓	-	-

1 - 12

(3) Add composite primary key on lock table (lock table does not exist, while creating table add composite key)

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
CREATE TABLE LOCK1(L_ID NUMBER,L_NAME VARCHAR2(50),L_ADDRESS VARCHAR2(50),AGE NUMBER,CONSTRAINT PK_LOCK1 PRIMARY KEY(L_ID,L_NAME));
desc LOCK1;
```

Results Explain Describe Saved SQL History

Object Type TABLE Object LOCK1

Table	Column	Data Type	Length	Precision	Scale	Primary Key	Nullable	Default	Comment
LOCK1	L_ID	Number	-	-	-	1	-	-	-
	L_NAME	Varchar2	50	-	-	2	-	-	-
	L_ADDRESS	Varchar2	50	-	-	-	✓	-	-
	AGE	Number	-	-	-	-	✓	-	-

1 - 4

(4) Remove primary key constraint on job_id

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
ALTER TABLE JOB DROP CONSTRAINT PK_JOB;
DESC JOB;
```

Results Explain Describe Saved SQL History

Object Type TABLE Object JOB

Table	Column	Data Type	Length	Precision	Scale	Primary Key	Nullable	Default	Comment
JOB	JOB_ID	Varchar2	15	-	-	-	✓	-	-
	JOB_TITLE	Varchar2	30	-	-	-	✓	-	-
	MIN_SAL	Number	-	7	2	-	✓	-	-

(5) Remove foreign key constraint on employee table

User: 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
ALTER TABLE EMPLOYEE DROP CONSTRAINT FK_EMP;
DESC EMPLOYEE;
```

Results Explain Describe Saved SQL History

Object Type TABLE Object EMPLOYEE

Table	Column	Data Type	Length	Precision	Scale	Primary Key	Nullable	Default	Comment
EMPLOYEE	EMP_NO	Number	-	3	0	-	✓	-	-
	EMP_NAME	Varchar2	30	-	-	-	✓	-	-
	EMP_SAL	Number	-	8	2	-	✓	-	-
	EMP_COMM	Number	-	6	1	-	✓	-	-
	DEPT_NO	Number	-	3	0	-	✓	-	-
	L_NAME	Varchar2	30	-	-	-	✓	-	-

	PHONE	Number	-	10	0	-	✓	-	-

1 - 12

Conclusion :

From this practical, I have learnt about Add and Remove constraint.

Practical-12

Aim: Data Dictionary and E-R Diagram

Suppose that as the database administrator (DBA) in a hotel, you have to set up a database to capture all the following information that the hotel needs to maintain.

- The hotel offers three types of ROOMS, including single room, double room, and triple room. Every room is Identified by its unique number.
- Every employee at the hotel is either a receptionist, a cleaning staff, or a kitchen staff. Each RECEP-TIONIST is identified with her/his name, employee number and years of experience. Receptionists are responsible for ensuring the room is clean before the room is assigned to the guest. Thus, they assign a single CLEANING STAFF to clean each room every morning and/or whenever it is required. Note that the same room may need to be cleaned several times on the same day, before it gets reassigned. For each cleaning assignment, the date and the status need to be provided. The KITCHEN STAFF is characterized by their specific responsibilities, e.g. being a cook or a waiter. The cleaning staff and the kitchen staff are also uniquely identified by their employee number.
- Receptionist welcome GUESTS and upon presentation of their valid traveling documents, they allocate a unique room to each guest and specify one group of facilities which is accessible to the guest during his stay. Guests are uniquely identified with their passport number but other necessary information are also recorded about the guests, including: name, phone numbers, arrival date, departure date, and credit card number. Each FACILITY GROUP contains specific set of facilities, e.g. the bar or gym, in order to be used by the guests. The arrival and departure dates of a guest will in turn determine the occupation of a specific room.

- A guest can be accompanied with one person to have a double room or at most two people for a triple room. Each ACCOMPANYING person is identified by his/her name.

(12.1) Design Data Dictionary for above problem.

(12.2) Considering the descriptions given above, draw an ER diagram for the database, representing entities, attributes, and relationships.

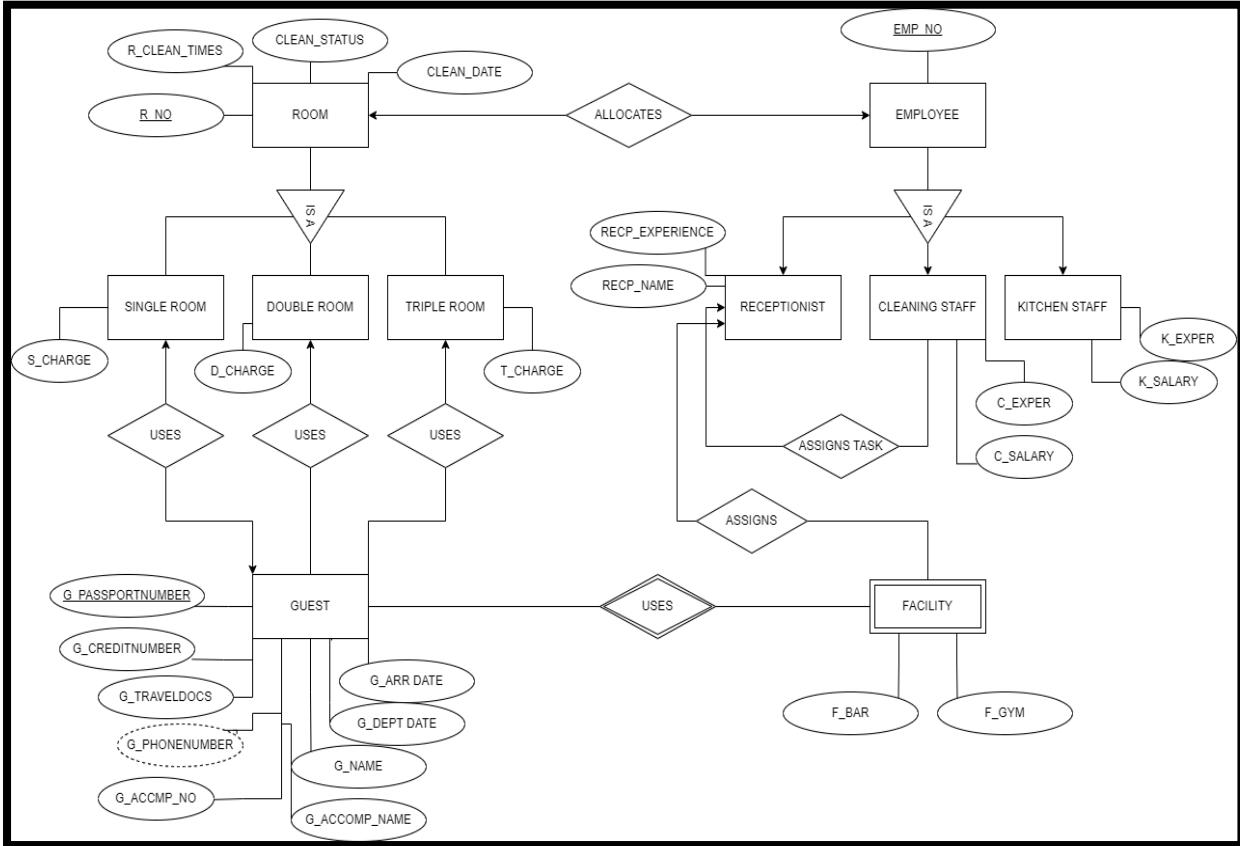

Hint: Pay attention to clear identification of different kinds of attributes (e.g., multi-valued, derived, and Primary key), the total participation for the relationship sets and generalization (or specialization) of entities.

Output :

ENTITY	ATTRIBUTE	DATATYPE	LENGTH	CONSTRAINT
ROOM	CLEAN_DATE	DATE	-	NOT NULL
	CLEAN_STATUS	VARCHAR2	15	NOT NULL
	R_NO	NUMBER	8	PRIMARY KEY
	R_CLEAN_TIME	NUMBER	20	-
SINGLE ROOM	S_CHARGE	NUMBER	8	NOT NULL
DOUBLE ROOM	D_CHARGE	NUMBER	8	NOT NULL
TRIPLE ROOM	T_CHARGE	NUMBER	8	NOT NULL
EMPLOYEE	EMP_NO	VARCHAR	10	PRIMARY KEY
RECEPTIONIST	RECP_EXPERIENCE	NUMBER	2	-
	RECP_NAME	VARCHAR2	20	NOT NULL
CLEANING STAFF	C_EXPER	NUMBER	2	-
	C_SALARY	NUMBER	-	NOT NULL
KITCHEN STAFF	K_SALARY	NUMBER	-	NOT NULL
	K_EXPER	NUMBER	2	-
GUEST	G_PASSPORTNUMBER	NUMBER	20	PRIMARY KEY
	G_CREDITNUMBER	NUMBER	20	NOT NULL
	G_TRAVELDOCS	NUMBER	20	-
	G_PHONENUMBER	NUMBER	10	NOT NULL
	G_ACCMP_NO	NUMBER	-	-
	G_ARRDATE	DATE	-	NOT NULL

	G_DEPTDATE	DATE	-	-
	G_NAME	VARCHAR2	20	NOT NULL
	G_ACCOMPNAME	VARCHAR2	20	NOT NULL
FACILITY	F_BAR	VARCHAR2	20	-
	F_GYM	VARCHAR2	20	-

E-R Diagram:

Conclusion :

From this practical we learned about how ER diagram is designed and how data dictionary is designed.

Practical-13

Aim: To perform basic PL/SQL blocks

Write a PL-SQL block to find Sum and average of three numbers.

Program :

```

DECLARE
a number := 5;
b number := 10;
c number := 15;
sum1 number;
avg1 number;
BEGIN
sum1 := a+b+c;
avg1 := (sum1)/3;
dbms_output.put_line('Sum is : ' || sum1);
dbms_output.put_line('Average is: ' || avg1);
END

```

Output :

The screenshot shows a SQL command window with the following details:

- User: 20DIT054
- Home > SQL > SQL Commands
- Autocommit: checked
- Display: 10
- Save and Run buttons
- SQL code entered in the editor:

```

DECLARE
a number := 5;
b number := 10;
c number := 15;
sum1 number;
avg1 number;
BEGIN
sum1 := a+b+c;
avg1 := (sum1)/3;
dbms_output.put_line('Sum is : ' || sum1);
dbms_output.put_line('Average is: ' || avg1);
END

```

- Results tab active
- Output displayed below the results tab:

```

Sum is : 30
Average is: 10
Statement processed.

```

Conclusion :

From this practical we learned about how to add and remove the constraints on any table while on creation as well as after table is created.

Practical-14

Aim: To perform the concept of loop

Find the factorial of a number in pl/sql using for, While and Simple Loop.

Program :

```
declare
n number:=5;
a number :=n;
fac number :=1;

n1 number:=6;
a1 number :=n1;
fac1 number :=1;

A2 NUMBER:=5;
FACT NUMBER:=1;

begin
dbms_output.put_line('WHILE LOOP');

while(n>=1) loop
fac := fac*n;
n:= n-1;
end loop;

dbms_output.put_line('Factorial of ' || a ||' is ' || fac);

dbms_output.put_line('SIMPLE LOOP');

loop
fac1 := fac1*n1;
n1:= n1-1;
if(n1=1) then
exit;
end if;
end loop;

dbms_output.put_line('Factorial of ' || a1 ||' is ' || fac1);
```

```
DBMS_OUTPUT.PUT_LINE('FOR LOOP');
FOR I IN 1..A2 LOOP
FACT:=FACT*I;
END LOOP;
DBMS_OUTPUT.PUT_LINE('FACTORIAL OF 5 IS: '|| FACT);

end;
```

Output :

The screenshot shows the Oracle SQL Developer interface. The top navigation bar indicates 'User: 20DIT054' and 'Home > SQL > SQL Commands'. Below the toolbar, there's a code editor window containing PL/SQL code. The code defines three loops: WHILE LOOP, SIMPLE LOOP, and FOR LOOP, each calculating the factorial of a number. The results are displayed in the 'Results' tab at the bottom, showing the output for each loop type.

```
begin
dbms_output.put_line('WHILE LOOP');

while(n>=1) loop
fac := fac*n;
n:= n-1;
end loop;

dbms_output.put_line('Factorial of ' || a || ' is ' || fac);
dbms_output.put_line('SIMPLE LOOP');

loop
fac1 := fac1*n1;

Results Explain Describe Saved SQL History
```

WHILE LOOP
Factorial of 5 is 120
SIMPLE LOOP
Factorial of 6 is 720
FOR LOOP
FACTORIAL OF 5 IS: 120
Statement processed.

Conclusion :

From this practical we learned how can we implement the factorial program using the PL/SQL.

Practical-15

Aim: To understand the concept of “select into” and “% type” attribute.

Create an EMPLOYEES table that is a replica of the EMP table. Add a new column, STARS, of VARCHAR2 data type and length of 50 to the EMPLOYEES table for storing asterisk (*).

Create a PL/SQL block that rewards an employee by appending an asterisk in the STARS column for every Rs1000/- of the employee’s salary. For example, if the employee has a salary amount of Rs8000/-, the string of asterisks should contain eight asterisks. If the employee has a salary amount of Rs12500/-, the string of asterisks should contain 13 asterisks.

Update the STARS column for the employee with the string of asterisks.

Program :

```

DECLARE
MIN_EMP_NO EMPLOYEE.EMP_NO%TYPE;
MAX_EMP_NO EMPLOYEE.EMP_NO%TYPE;
NO_STAR NUMBER;
STAR_STR VARCHAR2(20);
BEGIN
SELECT MAX(EMP_NO) INTO MAX_EMP_NO FROM EMPLOYEE;
SELECT MIN(EMP_NO) INTO MIN_EMP_NO FROM EMPLOYEE;
FOR i IN MIN_EMP_NO .. MAX_EMP_NO LOOP
SELECT ROUND(EMP_SAL/1000) INTO NO_STAR FROM EMPLOYEE WHERE
EMP_NO = i;
IF NO_STAR > 0 THEN
STAR_STR := "";
FOR j IN 1 .. NO_STAR LOOP
STAR_STR := STAR_STR || '*';
END LOOP;
END IF;
UPDATE EMPLOYEE SET STARS = STAR_STR WHERE EMP_NO = i ;
END LOOP;
END;

```

Output :

User: 20DIT054

Home > SQL > SQL Commands

```

 Autocommit   
EMP_NO = i;
IF NO_STAR > 0 THEN
STAR_STR := '';
FOR j IN 1 .. NO_STAR LOOP
STAR_STR := STAR_STR || '*';
END LOOP;
END IF;
UPDATE EMPLOYEE SET STARS = STAR_STR WHERE EMP_NO = i ;
END LOOP;
END;

```

Results Explain Describe Saved SQL History

Statement processed.

EMP_NO	EMP_NAME	EMP_SAL	EMP_COMM	DEPT_NO	L_NAME	DEPT_NAME	JOB_ID	LOCATION	MANAGER_ID	HIREDATE	PHONE	STARS
101	Smith	800	-	10	shah	machine learning	fi_mgr	toronto	105	09-AUG-96	-	*
102	Snehal	1600	300	25	gupta	data science	lec	las vegas	-	14-MAR-96	-	**

107	Anamika	2975	-	30	jha	artifical intelligence	it_prog	new york	-	15-JUL-97	-	***

Conclusion :

After performing this practical, we understood the concept of select into and %type in PL/SQL.

Practical-16

Aim: To perform the concept of cursor

(a) Display all the information of EMP table using %ROWTYPE.

(b) Create a PL/SQL block that does the following:

In a PL/SQL block, retrieve the name, salary, and MANAGER ID of the employees working in the particular department. Take Department Id from user.

If the salary of the employee is less than 1000 and if the manager ID is either 7902 or 7839, display the message <<last name>> Due for a raise. Otherwise, display the message <<last_name>> Not due for a raise.

Program :

(a)

```

DECLARE

CURSOR C1 IS
SELECT
EMP_NO,EMP_NAME,EMP_SAL,DEPT_NO,L_NAME,DEPT_NAME,JOB_ID,MANAG
ER_ID FROM EMPLOYEE WHERE EMP_NO=103;

EMP_RECORD C1%ROWTYPE;

BEGIN

OPEN C1;
LOOP

FETCH C1 INTO EMP_RECORD;
EXIT WHEN C1%NOTFOUND;

DBMS_OUTPUT.PUT_LINE('EMPLOYEE NUMBER IS: ' || EMP_RECORD.EMP_NO);
DBMS_OUTPUT.PUT_LINE('EMPLOYEE NAME IS: ' || EMP_RECORD.EMP_NAME);
DBMS_OUTPUT.PUT_LINE('EMPLOYEE SALARY IS: ' || EMP_RECORD.EMP_SAL);
DBMS_OUTPUT.PUT_LINE('EMPLOYEE DEPARTMENT NUMBER IS: ' ||
EMP_RECORD.DEPT_NO);
DBMS_OUTPUT.PUT_LINE('EMPLOYEE LAST NAME IS: ' ||
EMP_RECORD.L_NAME);
DBMS_OUTPUT.PUT_LINE('EMPLOYEE DEPARTMENT NAME IS: ' ||
EMP_RECORD.DEPT_NAME);

```

```

DBMS_OUTPUT.PUT_LINE('EMPLOYEE JOB ID IS: ' || EMP_RECORD.JOB_ID);
DBMS_OUTPUT.PUT_LINE('EMPLOYEE MANAGER_ID IS: ' || 
EMP_RECORD.MANAGER_ID);

END LOOP;
CLOSE C1;
END

```

Output :

User: 20DIT054
Home > SQL > SQL Commands
Autocommit Display 10 Save Run
DBMS_OUTPUT.PUT_LINE('EMPLOYEE JOB ID IS: ' || EMP_RECORD.JOB_ID);
DBMS_OUTPUT.PUT_LINE('EMPLOYEE MANAGER_ID IS: ' || EMP_RECORD.MANAGER_ID);
END LOOP;
CLOSE C1;
END

Results Explain Describe Saved SQL History

EMPLOYEE NUMBER IS: 103
EMPLOYEE NAME IS: Dhruvin
EMPLOYEE SALARY IS: 1100
EMPLOYEE DEPARTMENT NUMBER IS: 20
EMPLOYEE LAST NAME IS: wales
EMPLOYEE DEPARTMENT NAME IS: machine learning
EMPLOYEE JOB ID IS: mk_mgr
EMPLOYEE MANAGER_ID IS: 105

Statement processed.

Program :

(b)

```

DECLARE
  CURSOR C1 IS
    SELECT * FROM EMPLOYEE;
  EMP_RECORD C1%ROWTYPE;
BEGIN
  OPEN C1;
  LOOP
    FETCH C1 INTO EMP_RECORD;
    EXIT WHEN C1%NOTFOUND;
    IF(EMP_RECORD.EMP_SAL<1000 AND (EMP_RECORD.MANAGER_ID=7902 OR
    EMP_RECORD.MANAGER_ID=7839)) THEN

```

```
DBMS_OUTPUT.PUT_LINE(EMP_RECORD.L_NAME || ' DUE FOR A RAISE');

ELSE
DBMS_OUTPUT.PUT_LINE(EMP_RECORD.L_NAME || ' NOT DUE FOR A RAISE');

END IF;
END LOOP;
CLOSE C1;
END
```

Output :

The screenshot shows the Oracle SQL developer interface. In the top navigation bar, it says "User: 20DIT054" and "Home > SQL > SQL Commands". Below the toolbar, there's a code editor window with the following content:

```
DBMS_OUTPUT.PUT_LINE(EMP_RECORD.L_NAME || ' NOT DUE FOR A RAISE');

END IF;
END LOOP;
CLOSE C1;
END
```

Below the code editor, there are tabs for "Results", "Explain", "Describe", "Saved SQL", and "History". The "Results" tab is selected. The output pane displays the results of the execution:

```
shah NOT DUE FOR A RAISE
gupta NOT DUE FOR A RAISE
wales NOT DUE FOR A RAISE
sharma NOT DUE FOR A RAISE
patel NOT DUE FOR A RAISE
joseph NOT DUE FOR A RAISE
jha NOT DUE FOR A RAISE
```

At the bottom of the output pane, it says "Statement processed."

Conclusion :

From this practical we learned that the implementation of cursor and %TYPE and %ROWTYPE

Practical-17

Aim: To perform the concept of trigger

Write a PL/SQL block to update the salary where deptno is 10. Generate trigger that will store the original record in another table before updation take place.

Program :

```

EMP_NO NUMBER,
EMP_SAL NUMBER
);
CREATE OR REPLACE TRIGGER COPY_SALARY BEFORE UPDATE
ON EMPLOYEE4
FOR EACH ROW DECLARE
EMP_SAL NUMBER; EMP_NO NUMBER;
BEGIN
EMP_SAL := :OLD.EMP_SAL; EMP_NO := :OLD.EMP_NO;
INSERT INTO SALARY VALUES (EMP_NO,EMP_SAL);
END;
UPDATE EMPLOYEE4 SET EMP_SAL = 3500 WHERE DEPT_NO = 10

```

Output :

```

Home > SQL > SQL Commands
 Autocommit 

```

); -
CREATE OR REPLACE TRIGGER COPY_SALARY BEFORE UPDATE
ON EMPLOYEE4
FOR EACH ROW DECLARE
EMP_SAL NUMBER; EMP_NO NUMBER;
BEGIN
EMP_SAL := :OLD.EMP_SAL; EMP_NO := :OLD.EMP_NO;
INSERT INTO SALARY VALUES (EMP_NO,EMP_SAL);
END;
UPDATE EMPLOYEE4 SET EMP_SAL = 3500 WHERE DEPT_NO = 10

```

---

Results Explain Describe Saved SQL History

| EMP_NO | EMP_SAL |
|--------|---------|
| 101    | 2500    |
| 104    | 2500    |
| 105    | 2500    |
| 106    | 2500    |

```

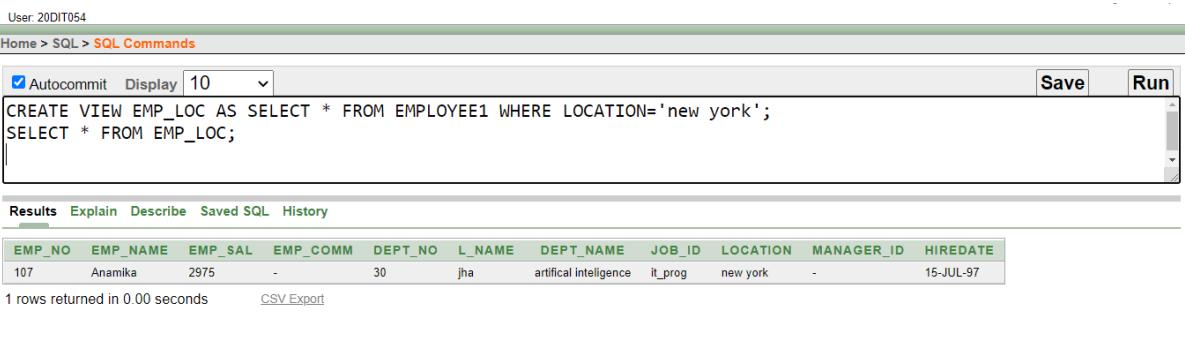

Conclusion :

From this practical we learned about how we can set the triggers and display the updation messages in output.

Practical-18

Aim: To solve queries using the concept of View.

(1) Write a query to create a view for those employees belongs to the location New York.

User 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

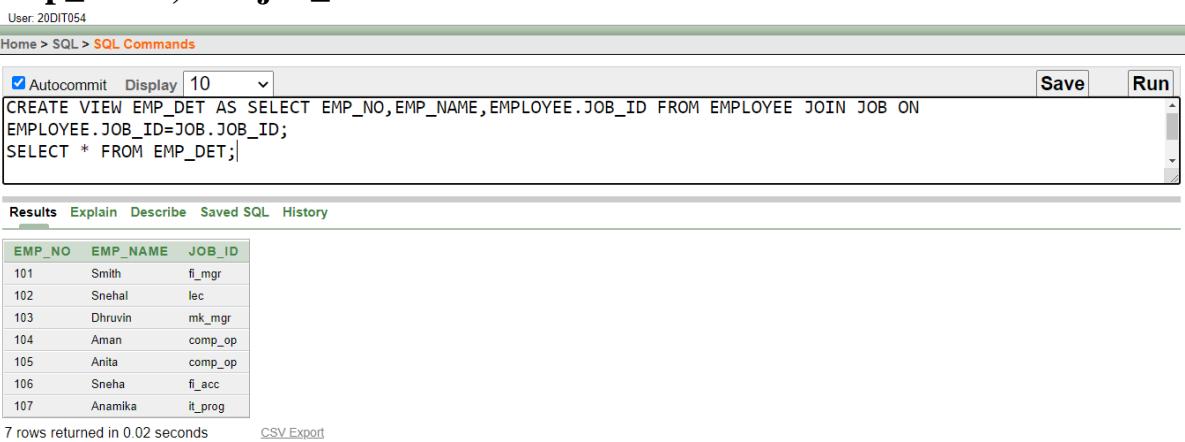

```
CREATE VIEW EMP_LOC AS SELECT * FROM EMPLOYEE1 WHERE LOCATION='new york';
SELECT * FROM EMP_LOC;
```

Results Explain Describe Saved SQL History

EMP_NO	EMP_NAME	EMP_SAL	EMP_COMM	DEPT_NO	L_NAME	DEPT_NAME	JOB_ID	LOCATION	MANAGER_ID	HIREDATE
107	Anamika	2975	-	30	jha	artificial intelligence	it_prog	new york	-	15-JUL-97

1 rows returned in 0.00 seconds [CSV Export](#)

(2) Write a query to create a view for all employee with columns emp_id, emp_name, and job_id.

User 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

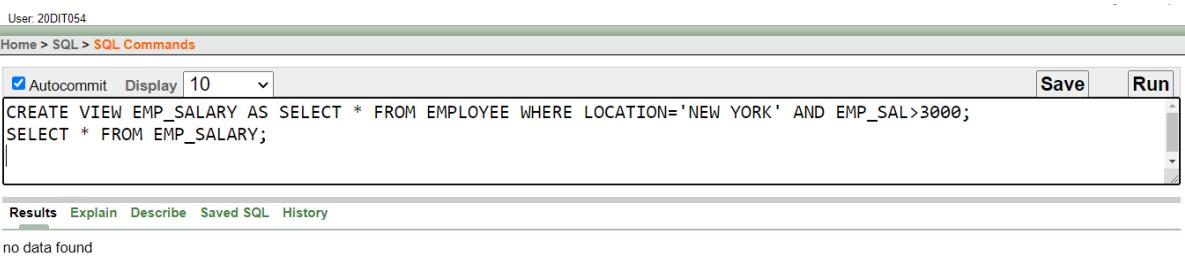

```
CREATE VIEW EMP_DET AS SELECT EMP_NO,EMP_NAME,EMPLOYEE.JOB_ID FROM EMPLOYEE JOIN JOB ON
EMPLOYEE.JOB_ID=JOB.JOB_ID;
SELECT * FROM EMP_DET;
```

Results Explain Describe Saved SQL History

EMP_NO	EMP_NAME	JOB_ID
101	Smith	fi_mgr
102	Snehal	lec
103	Dhruvin	mk_mgr
104	Aman	comp_op
105	Anita	comp_op
106	Sneha	fi_acc
107	Anamika	it_prog

7 rows returned in 0.02 seconds [CSV Export](#)

(3) Write a query to find the salesmen of the location New York who having salary more than 3000.

User 20DIT054
Home > SQL > SQL Commands

Autocommit Display 10

```
CREATE VIEW EMP_SALARY AS SELECT * FROM EMPLOYEE WHERE LOCATION='NEW YORK' AND EMP_SAL>3000;
SELECT * FROM EMP_SALARY;
```

Results Explain Describe Saved SQL History

no data found

(4) Write a query to create a view to getting a count of how many employees we have at each department.

User: 20DIT054
Home > SQL > SQL Commands
Autocommit Display 10 Save Run
CREATE VIEW EMP_GRP AS SELECT DEPT_NAME,COUNT(DEPT_NAME) AS "COUNT" FROM EMPLOYEE GROUP BY DEPT_NAME ORDER BY COUNT(DEPT_NAME);
SELECT * FROM EMP_GRP;

Results Explain Describe Saved SQL History

DEPT_NAME	COUNT
big data analytics	1
virtual reality	1
artifical intelligence	1
data science	1
big data anyltics	1
machine learning	2

6 rows returned in 0.11 seconds CSV Export

Conclusion :

From this practical we learned about creating a view and altering the data in main database would also update the data in the view.
